

The goal of this book is to help AP Physics C (motivated) high school students to learn the conceptual subject and associated process for the AP exam. The full compilation of the book is written for each student in more than 20 years of teaching the subject. The structure of topics is balanced.

It is an attempt to create a conceptual course of the course, that is much shorter than the majority of the textbooks available on the market. Some attention is paid to provide the explanation of the major physical concepts and not to re-derive the formulas. At the end of each chapter, the problem-solving strategies for the topics are discussed, and several examples of AP exam problems, related to the chapters topic, with complete solutions are included.

This book can be viewed as physics teachers as supplementary material of their preparation for the students. It would be useful to college students, who are taking an introductory course in Mechanics.
