

Starting & Stopping

Choke operation/engine warm-up

This engine is a low emissions engine which operates differently from previously built engines. It is designed for maximum performance and life if operated with the choke fully open (in RUN) and throttle fully open (in FAST). To open the choke fully requires an engine warm-up period of several seconds to several minutes, depending on the temperature.

After starting engine, first open the choke (toward RUN) until the engine just begins to run smoothly. Then open the choke in small steps, allowing the engine to accept small changes in speed and load, until the choke is fully open (in RUN).

During engine warm-up, the equipment can be operated.

To obtain best starting results

Store and fuel lawn mower in level position.

Start lawn mower on hard surface or over previously cut grass.

 Do not use a pressurized starting fluid. Starting fluid is flammable. Severe engine damage or fire may occur.

 Periodically remove grass build-up under mower deck. Remove spark plug wire before removing grass. When tipping lawn mower to remove grass, keep spark plug side of engine up.

A warm engine requires less choking than a cold engine.

Starting in cold weather

Use the correct oil for the starting temperature expected.

De-clutch all possible external loads.

Set speed control at part throttle position.

A warm battery has more starting capacity than a cold battery.

Do not use gasoline left over from summer. Use fresh winter grade gasoline which has higher volatility to improve starting.

Before starting engine

Move choke control to CHOKE or START position.

Note: Choke must fully close. If engine does not start, see control adjustments on page 5.

Typical choke controls

If equipment has separate choke and throttle controls, move throttle control to FAST position.

Open fuel shut-off valve, if equipped.

Typical throttle

Fuel shut-off

Start engine

 Always keep hands and feet clear of mower blade or other rotating machinery.

Rewind starter

 Grasp rope handle as illustrated and pull slowly until resistance is felt. Then pull cord rapidly to overcome compression, prevent kickback and start engine.

Repeat if necessary with choke off and throttle control in FAST position. Operate engine in FAST position.

Rewind starter

Electric starter, if equipped

Turn key to START or press button. Repeat if necessary with throttle control in FAST position. Operate engine in FAST position.

Note: If equipment manufacturer has supplied battery, charge it before trying to start engine, as equipment manufacturer recommends. Use short starting cycles (15 secs. per min.) to prolong starter life. Extended cranking can damage starter motor.

Typical electric starter

Stop engine

Do not move choke control to CHOKE position to stop engine. Backfire or engine damage may occur.

Move throttle control to SLOW position, then to STOP or turn key to OFF, depending on how equipped.

Always remove key from switch, if equipped, when equipment is not in use or left unattended.

Typical stop controls

 When engine is transported, close fuel shut-off valve (if engine is equipped) to prevent fuel leakage.

Fuel shut-off
