Charles Herbert Clark, 2018-01-05 Excerpt from A Laboratory Manual in Practical Botany Tm course of botanical study here outlined is intended to give the student a general view of the subject and at the same time to lay a foundation upon which more advanced studies may be built The outline of classification is to serve as a chart in the practical work in the laboratory The book is a laboratory manual The student's first work should be with the practical studies and these are not necessarily to be taken up in the order in which they occur in the classification To the writer it seems a good plan to use so much of the classification morphology and physiology as are given in these pages as the starting point to ask the student to read as many of the references given in connection with the various subjects as time permits and to require him to embody the results of his reading and practical work in well considered essays So pursued the study of botany provides the means of developing habits of close and accurate observation of cultivating the reasoning powers and of teaching the pupil to use clear and correct English that can scarcely be claimed for any other subject pursued in the schools About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
