Contextualizing Systems Biology Martin Döring,Imme Petersen,Anne Brüninghaus,Regine Kollek,2015-12-18 This collective monograph aims at contributing to an improved understanding of the epistemic presumptions sociocultural implications and historically backgrounds of the newly emerging and currently expanding approach of systems biology In doing so it offers empirically grounded valuable and reflexive information about a paradigmatic shift in the biosciences for a wide range of scientists working in the interdisciplinary areas of systems biology synthetic biology molecular biology biology the philosophy of science the sociology of science and scientific knowledge science and technology studies technology assessment and the like The authors of this monograph share the theoretical methodological premise that science is a culturally and socially embedded practice which characterizes our culture as a scientific one and at the same time draws its innovative potential from its socio cultural context This dialectic relationship lies at the heart of the current development of systems biology which is conceived as a so called successor of omics research and triggered by high throughput information technologies At the same time a need for a holistic conceptualization of complex biological processes emerges The title *Contextualizing Systems Biology* suggests that this book analyzes the development and advent of systems biology from different theoretical and methodological perspectives We investigate a variety of contexts ranging from the analysis of cognitive contexts such as basic theoretical concepts to regulative contexts policies to the concrete application of a systems biology in the socio scientific context of a European research project In empirically analyzing these different and interrelated layers and dimensions of systems biology the scope of the book goes beyond present attempts to investigate the advent of new approaches in the biological sciences as it frames and assesses systems biology from an interdisciplinary and integrated perspective **Biom mineralization: From Fundamentals to Biomaterials & Environmental Issues** Frédéric Marin,Franz Brümmer,Antonio G. ,2022-11-09 Seminar paper from the year 2021 in the subject Psychology Industrial and organizational psychology grade 1 7
University of Kassel course Economics of Science Technology language English abstract Merton 1968 was first to coin the
term Matthew effect a phenomenon which describes the fact that scientist of a higher status will receive more credit for
similar work than scientists of comparatively lower status would receive The research in this field has expanded to more
areas than the scientific community for example to sports careers or education and is often casually described with the
phrase the rich get richer and the poor get poorer During this work the focus will lay on the scientific community The
particular topic of interest is the interaction between status effects prize winning and citations as a form of perceived quality
Starting with an introduction to the theoretical background of the Matthew effect in science we will learn that there are two
components to the Matthew effect namely the reward system and the communication system In the following empirical part
of the paper we will first take an extensive look at a study which examines whether a status shock triggers a citation boost
for the awarded scientist The results will show a citation premium following the awarding of the scientist but the effect is
limited in time and strongest on recent productions Afterwards studies with similar topics namely the Matthew effect in
relation to citations or prize winning will be reviewed Finally a discussion on the research state regarding the Matthew effect
is warranted It will become clear that research in relation to this topic must overcome some hurdles The measurement of
status and quality both variables who are anchored in the Matthew effect is difficult Furthermore the question of cause and
effect between status and delivered quality needs to be addressed This work ends with a conclusive section and a possible
outlook for future research **Hydrology in a Changing World** Trevor Daniell,Henny A. J. van Lanen,2014 Proceedings of

Rose,2018-11-26 Our everyday lives are increasingly intertwined with psychiatry and discussions of mental health Yet the
dominant medical discipline of psychiatry remains surrounded by controversy Is mental distress really an illness like any
other treatable by drugs Can psychiatrists differentiate between mental disorders normal eccentricities anxieties or even
sadness Should the power of psychiatrists be challenged by the knowledge of those with lived experience of mental ill health
In this penetrating analysis Nikolas Rose critiques the powerful part that psychiatry has come to play in the lives of so many
across the world A series of chapters each tackling an area of dispute head on opens wide the terrain of debate addressing
issues such as advances in brain science the politics of Western psychiatry s spread across the globe and recent evidence of
social adversity s role in producing mental ill health The answers we find to these pressing questions will shape the

psychiatric futures that are being brought into existence Ultimately this book proposes a radically different future no less evidence based or rigorous and indeed far more attuned to the realities of mental health and argues that as a branch of social medicine another psychiatry is possible *Medycyna weterynaryjna* ,2014 *The Review* ,1881 *English Mechanic and Mirror of Science and Art* ,1871
