

14 Resources

It is almost impossible to imagine a day, or even a few hours, without water or electricity. Natural resources have always been central to the human condition, but as the world population grows beyond 7 billion and economic growth proceeds, strains on natural resources are becoming more acute.

Many of the major areas of tension in the world today are related to natural resource issues. Oil is a focus of international concerns, and variations in oil prices have immediate and large effects on our economies. Fresh water is becoming increasingly scarce. Local and regional-scale water problems are closely linked to global demand for agricultural commodities, and this demand along with water scarcity contributes to rising food prices.

At the same time, we know that history is filled with examples of technological developments that have responded to natural resource needs. Rather than allowing resource stresses to worsen, we can imagine a wide variety of innovations and changing human habits that could make present resource crises irrelevant, and shift attention to commodities that we barely notice today.
