## Anatomy of the Digestive System

- Two main groups:
  - 1) Organs forming the alimentary canal
    - Performs all the digestive functions: ingests, digests, absorbs, and defecates
    - Propels the foodstuffs along its tract
  - 2) Accessory digestive organs
    - Assist the process of digestive breakdown in various ways
    - Teeth, tongue, and several large digestive glands

## Organs of the Alimentary Canal

### Alimentary Canal

- Also called "gastrointestinal (GI) tract" or "gut"
- Its organs are the mouth, pharynx, esophagus, stomach, small intestine, and large intestine
- Continuous, coiled, hollow muscular tube that winds through the ventral body cavity from the stomach to the anus
  - o Cadaver: approximately 9 meters or 30 feet long
  - o Living person: considerably shorter due to muscle tone
- Food material within this tube is technically outside the body because it has contact only with cells lining the tract and the tube is open to the external environment at both ends
- Contain two important intrinsic nerve plexuses that are part of the ANS and regulate the mobility and secretory activity of GI tract organs:
  - 1) Submucosal nerve plexus
  - 2) Myenteric nerve plexus

### Mouth

- Also called "oral cavity"
- Where food enters to get into the digestive tract
- Mucous membrane-lined cavity
- As the food enters the mouth, it is mixed with saliva and then masticated or chewed
- The breakdown of food begins before the food has even left the mouth

### Lips

- Also called "labia"
- Protects the anterior opening of the mouth
- Closes to hold the food between the teeth during chewing along with the cheeks
