

Introduction & Overview Questions

Prosimian affluence:

Identify one observable trait that tells you the fossil primate belongs in the Prosimian Clade/Order.

Thick Molar Enamel

Identify one observable trait that tells you the fossil primate belongs in the Superfamily Haplorhini.

Long V-shaped Mouth

Orangutan:

Identify similarities in observable traits between *Orangpithecus* and a modern orangutan. Note: The modern orangutan is a primate so do not compare dental formula or size.

Both obtain an outwards extended mouth and teeth, this can be seen when looking at the side profile. In addition, when looking at the front profile, they both have narrow, long, oval-shaped, and close together eyes. Lastly, the shape of their teeth are very similar.

Gigantopithecus:

Identify the teeth (tooth type and how many of each type) that are present.

The *gigantopithecus* has two incisors, one canine, two premolars, three molars and the dental formula is 2:1:2:3.

Examine the dental wear. What can you infer about the diet based on the dental wear?

Based on the unique features of its teeth (enlarged premolars and patterns of wear), and its massive size, the species has been known to have a wide range vegetation. This is because small silica particles (phytoliths) from grass were found stuck to the molars of the species and due to carbon isotopic composition of enamel, it suggested that *gigantopithecus* wide range vegetation consisted of fruits, leaves, roots, and bamboo.
