**Computerized Medical Office Management** Joan Marie Johnson,Marcus W. Johnson,1994      *Identification of Sleep Deprivation from Single-Channel EEG Using Machine Learning Methods* ,2022      *Effects of Sleep Deprivation on EEG-based Measures of Criticality and Complexity* Asaf Harel,2017 Sleep deprivation is known to adversely affect basic cognitive abilities such as object recognition and decision making It affects the dynamics of neuronal networks in the brain and can even lead to hallucinations and epileptic seizures Several lines of evidence indicate that it modifies the balance of excitation and inhibition in neural circuits and it is hypothesized that the functional role of sleep is to restore this balance Assessing the effects of sleep deprivation using non invasive measurements of brain activity provides novel insights into the dynamical changes that take place in the brain In this study we quantified the effects of sleep deprivation using novel EEG based measures based on the concepts of criticality and complexity We also looked at correlations between the EEG based measures and behavioral measures such as reaction time in a psychomotor vigilance task PVT and several cognitive tests Significant changes in both criticality based parameters and entropy based complexity measures have been found and are correlated with the different sleep deprivation states These correlations provide further insights into the relationship between the changes in the underlying dynamics and cognitive manifestations
