A hypothesis is a tentative statement or explanation that proposes a possible relationship between variables and is subject to testing and verification.

OVERVIEW

It is formulated based on prior knowledge, observations, or theories. Hypotheses serve as a starting point for scientific investigation, and their validity is assessed through empirical evidence.

EXAMPLES

Defense of the Scientific Hypothesis Bradley E. Alger, 2019-09-03. *Defense of Scientific Hypothesis* From Reproducibility Crisis to Big Data argues that the scientific hypothesis is the key to understanding what science is about and explains its importance for scientists and non-scientists alike. Most scientists like the general public receive only cursory formal instruction about the scientific hypothesis. Since we all constantly assess what's going on around us, we continually formulate and test hypotheses consciously and unconsciously. The book distinguishes scientific from statistical hypotheses, analyzes the benefits of hypotheses and hypothesis testing, sorts out sciences that do not require hypotheses, discusses educational and social policies relating to the hypothesis, and offers advice on recognizing and formulating hypotheses.
