Engineering Human Computer Interaction and Interactive Systems Rémi Bastide, Philippe Palanque, Jörg Roth, 2005-07-11 As its name suggests the EHCI DSVIS conference has been a special event merging two different although overlapping research communities EHCI Engineering for Human Computer Interaction is a conference organized by the IFIP 2.7.13.4 working group started in 1974 and held every three years since 1989 The group's activity is the scientific investigation of the relationships among the human factors in computing and software engineering DSVIS Design Specification and Verification of Interactive Systems is an annual conference started in 1994 and dedicated to the use of formal methods for the design of interactive systems Of course these two research domains have a lot in common and are informed by each other's results The year 2004 was a good opportunity to bring closer these two research communities for an event the 11th edition of DSVIS and the 9th edition of EHCI EHCI DSVIS was set up as a working conference bringing together researchers and practitioners interested in strengthening the scientific foundations of user interface design specification and verification and in examining the relationships between software engineering and human computer interaction The call for papers attracted a lot of attention and we received a record number of submissions out of the 65 submissions 23 full papers were accepted which gives an acceptance rate of approximately 34% Three short papers were also included The contributions were categorized in 8 chapters Chapter 1 Usability and Software Architecture contains three contributions which advance the state of the art in usability approaches for modern software engineering

Introduction to Human-Computer Interaction Kasper Hornbæk, Per Ola Kristensson, Antti Oulasvirta, 2025-06-06 This is an open access title available under the terms of a CC BY NC ND 4.0

International licence It is free to read on the Oxford Academic platform and offered as a free PDF download from OUP and selected open access locations Aimed at undergraduate students in computer science design and engineering programs and master students in dedicated programs this is the first comprehensive textbook for students of human computer interaction While HCI is primarily a research driven field the book focuses not only on scientific principles of interaction but also on the very concrete goal of designing better computing systems The book revises and synthesizes topics that have been previously scattered across multiple books and papers including design engineering empirical methods and technology Although it covers emerging topics like VR and AI the book places its emphasis on the more time enduring principles and methods The book is open access and comes with associated materials for teachers and students available on the book s companion website

Designing Interactive Systems David Benyon,2010 Designing Interactive Systems is the most up to date and authoritative textbook in the areas of Human Computer Interaction HCI usability consumer experience and Interaction Design David Benyon has taken the well received first edition and remodelled it for the next era of interactive devices and applications

Design, Specification and Verification of Interactive Systems '97 Michael D. Harrison,Juan C. Torres,2012-12-06 An increasing recognition of the role of the human system interface is leading to new extensions and styles of specification Techniques are being developed that facilitate the expression of user oriented requirements and the refinement and checking of specifications of interactive systems This book reflects the state of the art in this important area and also contains a summary of working group discussions about how the various techniques represented might be applied to a common case study

Human-computer Interaction Alan Dix,1998 Extensively revised and rewritten in light of recent advances this best selling text is a comprehensive examination of human computer interaction The central focus of this exciting revision is the design of computer technology and how computer technology can be made more usable by people It provides a multi disciplinary approach to the subject through a synthesis of computer science cognitive science psychology and sociology and stresses a principled approach to interactive systems design that fits a software engineering environment
