Lean Execution Clifford Fiore, 2017-07-27 Many books explain how to construct a value stream map but few explain the process conditions and characteristics required to ensure a value stream map can be completed successfully Lean Execution The Basic Implementation Guide for Maximizing Process Performance fills this need Although the book explains Lean methods and tools that maximize proc **Accelerating Lean Six Sigma Results** Terence Burton, 2011-01-01 In the new economy the mandates for improvement initiatives are rapid deployment and sustainable results Accelerating Lean Six Sigma Results provides real world direction for this new improvement agenda with targeted rapid deployment and the Scalable Lean Six Sigma approach for quickly achieving high impact results return on investment and growth in global market share

A Public-Sector Journey to Lean Kate McGovern, 2018-10-26 Most Lean practitioners learn about the three Ms muda waste muri unevenness or variability and muri overburden and beginners in Lean generally focus on the removal of muda The impact of muri is not as readily understood It is extremely significant however for those working in government Decisions on staffing levels and resource allocation are made by elected officials who are generally disconnected from daily operations Short sighted cost cutting makes it difficult to deliver quality services as efficiently as possible The mantra of do more with less creates ever increasing muri In contrast to robust Lean programs in privately owned companies efficiency initiatives are regularly cut from public sector budgets Antiquated systems remain in place with too few workers to operate the existing processes The debilitating impact of persistent muri brings burnout and turnover perpetuating a vicious cycle Despite the muri a dedicated cadre of public servants is hard at work using Lean techniques and principles to break down bureaucratic red tape and improve the quality of services at every level of government across the country While the author incorporated examples of Lean initiatives in other states to give readers an idea of all the terrific work that is occurring this book is really the story of one of those journeys Using the author's experience while working for the State of New Hampshire you'll learn about the steps along the way Each chapter tells a story of what they did what they learned and how the lessons can be applied Annotated outlines of White Yellow and Green Belt programs and the Lean for Leaders workshop as well as two hypothetical scenarios that were used as training exercises are included These approaches are not intended to be authoritative or prescriptive they are offered as insights and examples You'll read about the challenges and pitfalls and the creative countermeasures developed by a dauntless team of Lean practitioners The story is shared to inform and encourage others material based on the New Hampshire Bureau of Education and Training's Lean programs is included throughout the book **Information Infrastructure Systems for Manufacturing II** John J. Mills, Fumihiko Kimura, 1999-05-31 In this global society manufacturers compete in many ways and information infrastructures play a critical role in ensuring the right information is available at the right time and the right place to support informed decision making The traditional approach that assumes all information can be located on a single mainframe and accessed by everybody in the enterprise has fallen by

the wayside and new infrastructures supporting extended or virtual enterprises and globally distributed supply chains are becoming increasingly vital to successful competitive organizations Functions data and information must be made be available to all without regard to location accessibility or the ability to view in a native format This book is a result of a conference which brought together a number of leading experts from around the world that work on topics related to the design implementation and use of information infrastructures for manufacturing These experts presented their views on the state of the art and on a wide variety of topics related to the title The topics range from the establishment of a generic enterprise framework which can be used for the design of a supporting information infrastructure to details of how geometric surfaces should be merged together Although not an exhaustive publication we believe that the publications in this book represent the state of the art in this research is essential reading for anyone who is attempting the design or development of an information infrastructure for all aspects of Manufacturing
