algebraic computational proofs rather than axiomatic proofs in the style of Euclid Stillwell proceeds to the areas of number theory non Euclidean geometry topology and logic and peers into the deep chasm between natural number arithmetic and the real numbers In its depths Cantor G del Turing and others found that the concept of proof is ultimately part of arithmetic This startling fact imposes fundamental limits on what theorems can be proved and what problems can be solved Shedding light on the workings of mathematics at its most fundamental levels The Story of Proof offers a compelling new perspective on the field s power and progress
