 The purpose of the author's research was to compare the entire muscular system of *Alouatta* with that of the spider woolly and woolly spider monkeys on the one hand and the capuchin on the other All of these

animals have prehensile tails The howler is usually grouped with the Ateles Lagothris and Brachyteles as a brachiator or as a semibrachiator Cebus is classified as a climber or as a quadruped It is hoped that by contrasting the differences and similarities between the howling monkey and the other four the muscular adaptations of Alouatta which have permitted this genus to follow its own evolutionary path will become evident
