S.A. Fist, 2012-12-06 This is not a dictionary and nor is it an encyclopedia It is a reference and compendium of useful
information about the converging worlds of computers communications telecommunications and broadcasting You could
refer to it as a guide for the Information Super Highway but this would be pretentious It aims to cover most of the more
important terms and concepts in the developing discipline of Informatics which in my definition includes the major
converging technologies and the associated social and cultural issues Unlike a dictionary this handbook makes no attempt to
be prescriptive in its definitions Many of the words we use today in computing and communications only vaguely reflect their
originations And with such rapid change older terms are often taken twisted inverted and mangled to the point where any
attempt by me to lay down laws of meaning would be meaningless The information here is descriptive I am concerned with
usage only This book therefore contains keywords and explanations which have been culled from the current literature from
technical magazines newspapers the Internet forums etc This is the living language as it is being used today not a historical
