Automotive Product Development Vivek D. Bhise, 2016-03-31 This new edition continues to explore the intricate processes of designing, developing, and manufacturing automotive products by integrating multiple levels of complex systems. It describes systems engineering and attribute engineering ensuring the new product meets the customer's desired attributes. It also discusses cascading vehicle-level attribute requirements to all vehicle systems, analyzing interfaces between systems, and developing interface requirements for seamless collaboration. The second edition of *Automotive Product Development: A Systems Engineering Implementation* has been meticulously revised to incorporate the most recent innovations in vehicle powertrains, driver interfaces, and state-of-the-art manufacturing techniques. Additionally, it discusses the influence of government regulations on safety, fuel economy, and emissions. This enhanced edition boasts four new chapters, 12 new sections, and updated examples in implementing new technologies, providing a comprehensive overview of the industry's challenges and the array of approaches and tools at engineers' disposal for designing, analyzing, and evaluating products. By mastering these essential steps, engineers can develop products that not only meet but exceed the needs and expectations of their customers. The ongoing goal of this book is to equip practicing and future engineering graduates in the automotive industry with the essential knowledge needed to understand the product development process and how to implement systems engineering. **Event Data Recorder (EDR) Interpretation** Christopher Armstrong, 2018-11-02 *Collision Reconstruction Methodologies Volume 7B*. The last ten years have seen explosive growth in the technology available to the collision analyst, changing the way reconstruction is practiced in fundamental ways. The greatest technological advances for the crash reconstruction community have come in the realms of photogrammetry and digital media analysis. The widespread use of scanning technology has facilitated the implementation of powerful new tools to digitize forensic data, create 3D models, and visualize and analyze crash vehicles and environments. The introduction of unmanned aerial systems and standardization of crash data recorders to the crash reconstruction community have enhanced the ability of a crash analyst to visualize and model the components of a crash reconstruction. Because of the technological changes occurring in the industry, many SAE papers have been written to address the validation and use of new tools for collision reconstruction. *Collision Reconstruction Methodologies Volumes 1-12* bring together seminal SAE technical papers surrounding advancements in the crash reconstruction field. Topics featured in the series include Night Vision Study and Photogrammetry Vehicle Event Data Recorders, Motorcycle, Heavy Vehicle, Bicycle, and Pedestrian Accident Reconstruction. The goal is to provide the latest technologies and methodologies being introduced into collision reconstruction, appealing to crash analysts, consultants, and safety engineers alike.
