2014 Physics Exemplar June:

Enhancing the Effectiveness of Team Science National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on the Science of Team Science, 2015-07-15
The past half century has witnessed a dramatic increase in the scale and complexity of scientific research. The growing scale of science has been accompanied by a shift toward collaborative research referred to as team science. Scientific research is increasingly conducted by small teams and larger groups rather than individual investigators, but the challenges of collaboration can slow these teams' progress in achieving their scientific goals. How does a team-based approach work, and how can universities and research institutions support teams? *Enhancing the Effectiveness of Team Science* synthesizes and integrates the available research to provide guidance on assembling the science team, leadership education, and professional development for science teams and groups. It also examines institutional and organizational structures and policies to support science teams and identifies areas where further research is needed to help science teams and groups achieve their scientific and translational goals. This report offers major public policy recommendations for science research agencies and policymakers, as well as recommendations for individual scientists, disciplinary associations, and research universities. *Enhancing the Effectiveness of Team Science* will be of interest to university research administrators, team science leaders, science faculty, and graduate and postdoctoral students.

Advancing Culturally Responsive Research and Researchers Penny A. Pasque, e alexander, 2022-08-19
Advancing Culturally Responsive Research and Researchers: Qualitative, Quantitative, and Mixed Methods encourages readers to design and engage in methodologies and methods that place cultural relevancy at the center of inquiry. In doing so, it highlights the need to uplift voices and needs of people who have been historically marginalized in the environments that we both inhabit and engage in as part of knowledge construction. The scholars whose work is featured in this volume take up research from different paradigmatic, ontological, epistemological, axiological, and methodological approaches, yet with adherence to centering cultural responsiveness in all research decisions. Each chapter seeks to extend understandings of social inequities, methodologies, and/or methods, and to contribute to meaningful and evolving social change through innovative and cutting-edge research strategies. While doing this work, the authors illustrate and highlight the importance of researcher positions and reflexivity in supporting the expansion of culturally responsive approaches; they also do so while considering global sociopolitical conditions of this moment in time. The contributions to this volume were initially presented at the first biennial Advanced Methods Institute in 2021. The Institute was hosted by QualLab in The Ohio State University's College of Education and Human Ecology and shared this volume's thematic focus. As a handbook, the volume can help faculty and advanced researchers with interest in doing culturally responsive projects to better understand frameworks, approaches, and considerations for doing so. It includes activities to support readers in developing said understandings.

The Metric Tide James Wilsdon, 2016-01-20
Represents the

culmination of an 18 month long project that aims to be the definitive review of this important topic Accompanied by a scholarly literature review some new analysis and a wealth of evidence and insight the report is a tour de force a once in a generation opportunity to take stock Dr Steven Hill Head of Policy HEFCE LSE Impact of Social Sciences Blog A must read if you are interested in having a deeper understanding of research culture management issues and the range of information we have on this field It should be disseminated and discussed within institutions disciplines and other sites of research collaboration Dr Meera Sabaratnam Lecturer in International Relations at the School of Oriental and African Studies University of London LSE Impact of Social Sciences Blog Metrics evoke a mixed reaction from the research community A commitment to using data and evidence to inform decisions makes many of us sympathetic even enthusiastic about the prospect of granular real time analysis of our own activities Yet we only have to look around us at the blunt use of metrics to be reminded of the pitfalls Metrics hold real power they are constitutive of values identities and livelihoods How to exercise that power to positive ends is the focus of this book Using extensive evidence gathering analysis and consultation the authors take a thorough look at potential uses and limitations of research metrics and indicators They explore the use of metrics across different disciplines assess their potential contribution to the development of research excellence and impact and consider the changing ways in which universities are using quantitative indicators in their management systems Finally they consider the negative or unintended effects of metrics on various aspects of research culture Including an updated introduction from James Wilsdon the book proposes a framework for responsible metrics and makes a series of targeted recommendations to show how responsible metrics can be applied in research management by funders and in the next cycle of the Research Excellence Framework The metric tide is certainly rising Unlike King Canute we have the agency and opportunity and in this book a serious body of evidence to influence how it washes through higher education and research
