

CONIC SECTION

1. CONIC SECTIONS

A conic section, or conic is the locus of a point which moves in a plane so that its distance from a fixed point is in a constant ratio to its perpendicular distance from a fixed straight line.

- The fixed point is called the **Focus**.
- The fixed straight line is called the **Directrix**.
- The constant ratio is called the **Eccentricity** denoted by e .
- The line passing through the focus & perpendicular to the directrix is called the **Axis**.
- A point of intersection of a conic with its axis is called a **Vertex**.

2. SECTION OF RIGHT CIRCULAR CONE BY DIFFERENT PLANES

A right circular cone is as shown in the fig. 1

- (i) Section of a right circular cone by a plane passing through its vertex is a pair of straight lines passing through the vertex as shown in fig. 2

- (ii) Section of a right circular cone by a plane parallel to its base is a circle as shown in the fig. 3.

- (iii) Section of a right circular cone by a plane parallel to a generator of the cone is a parabola as shown in the fig. 4.

- (iv) Section of a right circular cone by a plane neither parallel to any generator of the cone nor perpendicular or parallel to the axis of the cone is an ellipse or hyperbola as shown in the fig. 5 & 6.

Level 3 Conic Sections Learning Workbook Tom Sidebotham, 2021-01-26 *An Elementary Treatise on Conic Sections* Charles Smith, 1883 Text Book Of Conic Section A.K. Sharma, 2005 There are number of books on Conic Section in the market for the use of degree students in various universities in India It is the experience of author that the average students need the treatment of theory in a way that should be easily comprehensible to him Therefore an effort has been made in this book to put the matter in a very lucid and simple way to that even a beginner has no difficulty in grasping the subject Each chapter for this book contains complete theory and a fairly large number of solved examples sufficient problems have also been selected from various university examination paper At the end of each chapter an exercise containing objective questions only has been given *A Geometrical Treatise of the Conic Sections* Hugh Hamilton, 1773 *Conic Sections Treated Geometrically* William Henry Besant, 1895 **A Treatise on Conic Sections** George Salmon, 2021-03-10 The classic book on the subject covering the whole ground and full of touches of genius Mathematical Association of America

Solid Geometry and Conic Sections James Maurice Wilson, 1872 A treatise on conic sections in five books. Book I. On the general properties of the Conic Sections: or the properties which are common to them all George WALKER (F.R.S., Dissenting Minister at Nottingham.), 1794 **An Introduction to the Study of Geometrical Conic Sections** James Hamblin Smith, 1887 *Shadows Of The Circle: Conic Sections, Optimal Figures And Non-euclidean Geometry* Vagn Lundsgaard Hansen, 1998-04-04 The aim of this book is to throw light on various facets of geometry through development of four geometrical themes The first theme is about the ellipse the shape of the shadow cast by a circle The next a natural continuation of the first is a study of all three types of conic sections the ellipse the parabola and the hyperbola The third

theme is about certain properties of geometrical figures related to the problem of finding the largest area that can be enclosed by a curve of given length This problem is called the isoperimetric problem In itself this topic contains motivation for major parts of the curriculum in mathematics at college level and sets the stage for more advanced mathematical subjects such as functions of several variables and the calculus of variations The emergence of non Euclidean geometries in the beginning of the nineteenth century represents one of the dramatic episodes in the history of mathematics In the last theme the non Euclidean geometry in the Poincaré disc model of the hyperbolic plane is developed

Conic Sections Treated Geometrically W. H Besant, 2019-09-26 In the present Treatise the Conic Sections are defined with reference to a focus and directrix and I have endeavoured to place before the student the most important properties of those curves deduced as closely as possible from the definition The construction which is given in the first Chapter for the determination of points in a conic section possesses several advantages in particular it leads at once to the constancy of the ratio of the square on the ordinate to the rectangle under its distances from the vertices and again in the case of the hyperbola the directions of the asymptotes follow immediately from the construction In several cases the methods employed are the same as those of Wallace in the Treatise on Conic Sections published in the Encyclopaedia Metropolitana
