Essential Readings in Problem-Based Learning Andrew Walker, Heather Leary, Cindy Hmelo-Silver, 2015-01-15 Like most good educational interventions problem based learning PBL did not grow out of theory but out of a practical problem Medical students were bored dropping out and unable to apply what they had learned in lectures to their practical experiences a couple of years later Neurologist Howard S Barrows reversed the sequence presenting students with patient problems to solve in small groups and requiring them to seek relevant knowledge in an effort to solve those problems Out of his work PBL was born The application of PBL approaches has now spread far beyond medical education Today PBL is used at levels from elementary school to adult education in disciplines ranging across the humanities and sciences and in both academic and corporate settings This book aims to take stock of developments in the field and to bridge the gap between practice and the theoretical tradition originated by Barrows that underlies PBL techniques Artificial Intelligence in Education. Physical Activity, Self-Regulation, and Executive Control Across the Lifespan Sean P. Mullen, Peter Hall, 2016-02-05 There is overwhelming evidence linking increased physical activity with positive changes in cognitive functioning and brain health Much of what we know about these interrelationships comes from aerobic exercise training studies with older adults and children This literature has paved the way for the neuroscientific investigation of mechanisms responsible for exercise induced cognitive and brain health enhancement a list that ranges from molecular changes to systemic changes in executive control and neural connectivity A new perspective has also emerged that aims to understand executive control processes that may underlie the regulation of health behavior In accordance with this view physical activity falls under the umbrella of health behaviors that require a substantial amount of executive control Executive control is a limited resource and the aging process depletes this resource People who regularly exercise are said to have

higher self regulatory control planning goal shielding and impulse control than irregular exercisers The successful maintenance of physical activity participation in lieu of daily cognitive stressors likely reflects an adaptive resistance to control failures Indeed a handful of studies have shown the relationship between greater executive control and subsequently higher levels of physical activity However little is known about the neural correlates of physical activity adherence or sedentary behavior with the view that neurocognitive factors have an antecedent and reciprocal influence on these behaviors No research has focused on the brain networks responsible for the self regulation of physical activity which likely overlaps with structures and functions playing critical roles in the regulation of other health behaviors Interdisciplinary investigations are needed to explain the extent to which physical activity self regulation and self regulatory failure is dependent upon or under the influence of executive control processes and brain networks Understanding the degree to which self regulatory resources may be enhanced restored and trained will have enormous implications for basic science and applied fields It is also of great import to understand whether or not physical activity self regulation is a domain specific behavior associated with specific brain networks or to determine the extent to which regulatory network sharing occurs The aim of this Frontiers Research Topic is to curate contributions from researchers in social and cognitive neurosciences and related fields whose work involves the study of physical activity behavior self regulation and executive control For this Research Topic we therefore solicit reviews original research articles and opinion papers which draw theoretical or empirical connections related to sustained physical activity behavior self regulatory strategies cognitive performance and brain structure and function While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations and methodological innovations This Frontiers Research Topic will carve out new directions for the fields of exercise cognitive and social neurosciences We hope you will consider submitting your work
