Advances in food science technology and engineering are occurring at such a rapid rate that obtaining current detailed information is challenging at best While almost everyone engaged in these disciplines has accumulated a vast variety of data over time an organized comprehensive resource containing this data would be invaluable to have The **Product Lifecycle Management (Volume 4): The Case Studies** John Stark, 2019-05-07 This book presents some twenty case studies showing how companies in different industry sectors and of different sizes make advances in Product Lifecycle Management PLM Like the author's previous volumes this book provides a valuable resource for those wishing to learn about PLM and how to implement and apply it in their companies Helping readers to learn about implementing and benefiting from PLM learn about good PLM solutions and best practice improve their planning and decision making abilities benefit from the lessons learned by the companies featured in the case studies proceed faster and further with PLM the book presents effective PLM solutions and best practices At the same time the case studies included demonstrate how different companies implement and benefit from PLM Each case study is addressed in a separate chapter and details a different situation enabling readers to put themselves in the situation and think through different actions and decisions A valuable resource for PLM team managers and employees in engineering and manufacturing companies the book is also of interest to researchers and students in industrial engineering fields Modern Technology for Sustainable Agriculture Arvind Kumar, V. K. Singh, Yogeshwar Singh, Susheel Kumar Singh, Pavan Kumar, 2025-08-02 Modern technology for sustainable agriculture is based primarily on three platforms namely science innovation and spatial technologies These are considered as the three pioneer pillars of nation building Spatial technologies play a vital role in improving soil quality reducing the waste of water during irrigation and sharing agricultural information with farmers With the help of terrestrial aquatic and aerial sensors satellites and surveillance equipment a large volume of geo spatial data from diverse sources is collected analyzed and utilized for smart farming and shielding of crops During last five decades agricultural research and extension has focused on the development of higher productivity of crop varieties increased fertilizer use and other production technologies These have enabled the farmers to grow more food but at the same time it over exploited the resources and resulted in decreasing farm productivity and profitability To tackle such problems harmonious use of inputs through integration of various land based enterprises and their compounded responses needs further attention to make the agriculture more productive profitable and sustainable Many technologies have been identified to support sustainable use of resources and facilities including Natural Resource Management NRM Resource Conservation Technologies RCTs Integrated Farming System IFS Integrated Crop Management ICM Integrated Nutrient Management INM protected cultivation practices secondary agricultural practices and post harvest technologies **Structural Concrete Textbook, Volume 5** fib Fédération internationale du béton, 2012-06-01 The third

edition of the Structural Concrete Textbook is an extensive revision that reflects advances in knowledge and technology over the past decade. It was prepared in the intermediate period from the CEP FIP Model Code 1990 MC90 to fib Model Code for Concrete Structures 2010 MC2010 and as such incorporates a significant amount of information that has been already finalized for MC2010 while keeping some material from MC90 that was not yet modified considerably. The objective of the textbook is to give detailed information on a wide range of concrete engineering from selection of appropriate structural system and also materials through design and execution and finally behaviour in use. The revised fib Structural Concrete Textbook covers the following main topics: phases of design process, conceptual design, short and long term properties of conventional concrete including creep, shrinkage, fatigue and temperature influences, special types of concretes such as self compacting concrete, architectural concrete, fibre reinforced concrete, high and ultra high performance concrete, properties of reinforcing and prestressing materials, bond, tension stiffening, moment curvature, confining effect, dowel action, aggregate interlock, structural analysis with or without time dependent effects, definition of limit states, control of cracking and deformations, design for moment, shear or torsion, buckling, fatigue, anchorages, splices, detailing, design for durability including service life, design aspects, deterioration mechanisms, modelling of deterioration mechanisms, environmental influences, influences of design and execution on durability, fire design including changes in material and structural properties, spalling, degree of deterioration, member design, linear members and slabs with reinforcement layout, deep beams, management, assessment, maintenance, repair including conservation strategies, risk management, types of interventions as well as aspects of execution, quality assurance, formwork and curing. The updated textbook provides the basics of material and structural behaviour and the fundamental knowledge needed for the design, assessment or retrofitting of concrete structures. It will be essential reading material for graduate students in the field of structural concrete and also assist designers and consultants in understanding the background to the rules they apply in their practice. Furthermore, it should prove particularly valuable to users of the new editions of Eurocode 2 for concrete buildings, bridges and container structures which are based only partly on MC90 and partly on more recent knowledge which was not included in the 1999 edition of the textbook.
