Chapter 3 Angiosperm Reproduction And Biotechnology:

Vegetal Sex Stella Sandford, 2022-10-06 This book introduces the reader to the exciting new field of plant philosophy and takes it in a new direction to ask what does it mean to say that plants are sexed Do male and female really mean the same when applied to humans trees fungi and algae Are the zoological categories of sex really adequate for understanding the uniquely dibiontic life cycle of plants Vegetal Sex addresses these questions through a detailed analysis of major moments in the history of plant sex from Aristotle to the modern day Tracing the transformations in the analogy between animals and plants that characterize this history it shows how the analogy still functions in contemporary botany and asks what would a non zoocentric plant centred philosophy of vegetal sex be like By showing how philosophy and botany have been and still are inextricably entwined Vegetal Sex allows us to think vegetal being and perhaps to recognize the vegetal in us all

Plant Breeding Abstracts ,1999 **Journey of a Single Cell to a Plant** S J Murch,Praveen K. Saxena,2005 In plants the ability to regenerate identical individuals from single cells is the basis for modern agriculture These scientific advancements have given us virus free stocks novel germplasms clonal propagation systems and the commercial introduction of difficult to propagate plant species The timescale for breeding programs was dramatically reduced as plant tissue culture technologies were developed to shorten the time between generations and reduce the number of generations required for a line to be developed Without the capacity to regenerate plants it would not have been possible for plant biotechnology and genetic engineering to have advanced this far This book contains detailed reviews by the leading scientists who made these discoveries

Embryology of Flowering Plants: Terminology and Concepts, Vol. 3 T B Batygina,2002 Drawing on the combined efforts of embryologists geneticists and molecular biologists this third volume studies the variability of morphogenesis and phenotype in population It pays particular attention to ecological embryology revealing the critical periods in early ontogenesis as well as plasticity and tolerance of reproductive systems at the level of species and population Highlighting the preservation of species diversity under conditions of ecological stress it examines problems connected with morphogenesis such as differentiation specialization and evaluation of features and considers the definition of the notions of gene and feature and genotype and phenotype
