
Chapter 36: Assessment of the Hematologic System

Ignatavicius: Medical-Surgical Nursing, 10th Edition

MULTIPLE CHOICE

1. What is the nurse's **priority** when caring for a client who just completed a bone marrow aspiration and biopsy?
- Teach the client to avoid activity for 24 to 48 hours to prevent infection.
 - Administer a nonsteroidal anti-inflammatory drug (NSAID) to promote comfort.
 - Check the pressure dressing frequently for signs of excessive or active bleeding.
 - Report the laboratory results to the primary health care provider.

ANS: C

The client having a bone marrow aspiration and biopsy has a puncture wound from the large needle used to extract the bone marrow. Therefore, the client is at risk for bleeding. A NSAID should not be given because it can cause bleeding. Avoiding activity helps to prevent bleeding, not infection, and reporting the results of the biopsy is not the responsibility of the nurse.
