Chapter 41: Animal Nutrition

Heterotrophs: obtain energy and nutrients from other organisms

Animals eat to:

1. Obtain energy by oxidizing carbon-based compounds to make ATP
2. Build macromolecules, using minerals and carbon-based building blocks

Four processes to obtain energy from food:

Ingestion: taking food into digestive tract

Digestion: breakdown of food into smaller pieces

- In digestive tract aka alimentary canal or GI tract (begins at mouth and ends at anus)

Absorption: uptake of nutrients

Elimination: disposal of wastes

Nutrients: provide chemical energy and carbon-containing building blocks

- **Macronutrients:** required in large amounts (carbs, fats, proteins)
- **Micronutrients:** required in small amounts (vitamins, minerals)

Food contains nutrients.

Amount of energy provided by food is measured in kilocalories.

Essential Nutrients: those that cannot be synthesized and must be obtained from diet.

9 of which humans must obtain from food: Histidine, Isoleucine, leucine, lysine, methionine, phenylalanine, threonine, tryptophan, valine

Vitamins: organic compounds that are vital for health but are required in minute amounts

- B1, B12, Niacin, folate, C, D

Minerals: inorganic substances; often components of enzyme cofactors or structural materials (Ca, Fe, Mg); some are electrolytes (Na⁺, K⁺, Cl⁻)

- Ca, Cl, F, I, Fe, Mg, P, K, Na, S

Strategies for Obtaining Food:

1. **Suspension Feeders:** filter small organisms or bits of organic debris from water by means of cilia, mucus-lined "nets", or other structures
2. **Deposit Feeders:** swallow organic-rich sediments and other types of deposited materials
3. **Fluid Feeders:** suck or lap up fluids, blood, nectar
4. **Mass Feeders:** seize and manipulate chunks of food

Many adaptations for capturing and processing food in the mouth (eels).

Carnassial of a carnivore: shearing of soft, tough foods

Molars of omnivore: rolling and crushing of brittle food

Cheek teeth of ungulate: shredding and grinding of tough, fibrous food
