Questions:

- Where does the most earthquakes and volcanoes occur on the Earth's surface?
Where tectonic plates meet.
- Explain why 'recycling' is used to describe the process of the tectonic plates.
New crust is created at mid-ocean ridges, and then subducted at convergent boundaries to be melted. At some point in time, the old crust that was melted will emerge again as new crust.
- How could the movement of tectonic plates create another supercontinent like Pangaea?
From the continuous movement of the tectonic plates, the continents will eventually come together again.
- The core of the Earth provides the heat that creates the convection currents of the mantle and drives the tectonic plates. Describe what would happen as the Earth's core cools down over billions of years?
As the Earth's core cools, convection currents will slow down and the plates will stop moving which will stop volcanic activity and earthquakes.
- What are the different ways in which the tectonic plates interact with each other as they move around?
The tectonic plates divide, collide and slide as they move around.
