

Chapter 44 - Osmoregulation & Excretion

Osmoregulation balances the uptake and loss of water and solutes.

Reverse Osmosis - Requires pressure

↳ applies pressure to overcome pressure that favors even distributions.

Osmosis and osmolarity -

Osmolarity: the solute concentration of a solution, determines movement of water across a selectively permeable membrane.

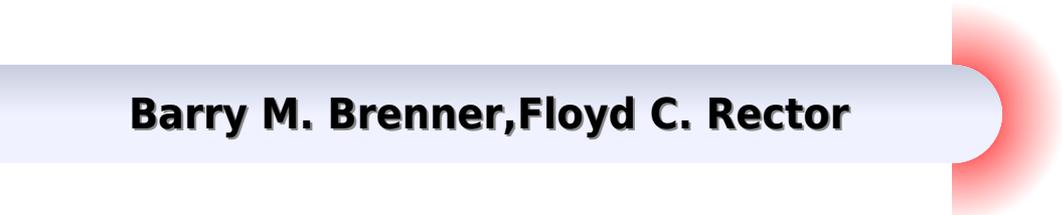

Osmoregulation controls solute concentrations and balances gain and loss of water.

Osmoconformers: (some marine animals) are isoosmotic with their surroundings and do not regulate their osmolarity.

Osmoregulators: expend energy to control water uptake and loss in a hyperosmotic / hypoosmotic environment.
