

Design of Short Columns

4.1.2 Design of Short Columns: A short column has a small height in relation to its cross sectional area. It is likely to fail due to crushing of the material unlike the slender columns which fail by buckling. The design of slender columns by buckling is dealt with later in this chapter.

Analytical Gas Chromatography Walter Jennings, 2012-12-02 Analytical Gas Chromatography is a free standing introduction to and guide through the rapidly progressing field of analytical gas chromatography The book is divided into 10 chapters that cover various aspects of analytical gas chromatography from most advantageous column type to troubleshooting The opening chapters of the book discuss the advantages of the open tubular column over the packed column This topic is followed by significant chapters on various variables in the gas chromatographic process including sample injection stationary phase carrier gas and installation The effect of changes in these variables on the solution elution order is also considered A chapter also examines the influence of instrumental design features such as excessive or unswept volumes in the flow path suitability of the detection mode and speed and fidelity of the data handling equipment The book also presents selected methods that have been employed to achieve better results for a given gas chromatographic problem The application areas of gas chromatographic process including food flavor fragrance petroleum and chemical related environment biology and medicine are also presented The concluding chapter addresses the basic troubleshooting knowledge and considers other chromatographic problems and methods for their rectification **Architectural & Structural Topic**

George Salinda Salvan, 1996 **Concrete Structures** Mehdi Setareh, Robert Darvas, 2016-08-13 This revised fully updated second edition covers the analysis design and construction of reinforced concrete structures from a real world perspective It examines different reinforced concrete elements such as slabs beams columns foundations basement and retaining walls and pre stressed concrete incorporating the most up to date edition of the American Concrete Institute Code ACI 318 14 requirements for the design of concrete structures It includes a chapter on metric system in reinforced concrete design and construction A new chapter on the design of formworks has been added which is of great value to students in the construction engineering programs along with practicing engineers and architects This second edition also includes a new appendix with color images illustrating various concrete construction practices and well designed buildings The ACI 318 14 constitutes the most extensive reorganization of the code in the past 40 years References to the various sections of the ACI 318 14 are provided throughout the book to facilitate its use by students and professionals Aimed at architecture building construction and undergraduate engineering students the scope of concepts in this volume emphasize simplified and practical methods in the analysis and design of reinforced concrete This is distinct from advanced graduate engineering texts where treatment of the subject centers around the theoretical and mathematical aspects of design As in the first edition this book adopts a step by step approach to solving analysis and design problems in reinforced concrete Using a highly graphical and interactive approach in its use of detailed images and self experimentation exercises Concrete Structures Second Edition is tailored to the most practical questions and fundamental concepts of design of structures in reinforced concrete The text stands as an ideal learning resource for civil engineering building construction and architecture students as well as a

Fluorescent Dye Labels and Stains The only comprehensive database of fluorophores and their physical and photochemical properties Fluorophores are chemical compounds that strongly absorb in the ultraviolet visible and or near infrared and with bright emission in these ranges As a result they are exceptionally valuable as dyes for various analytical processes capable of labelling and staining particular targets for purposes of fluorescent imaging sensitive detection and quantification exhibiting linear responses over very wide concentration ranges These compounds are many and varied and panoramic views of their options physical properties and their reactions to light excitations can be critical to their successful integration into chemical analysis pharmaceutical analysis clinical analysis microscopies optical bioimaging cancer imaging real time PCR flow cytometry multiplexing in proteomics life sciences in general and many other high tech fields material sciences traceability photovoltaics quantum computing

Fluorescent Dye Labels and Stains incorporates a comprehensive database of such substances and their characteristics It provides an introduction to basic theories and foundational terminology in addition to both the molecular structures and photophysical properties of an enormous range of fluorophores Assembled over the course of a distinguished career in biochemistry this database presents valuable information that has never before been available in a single volume Readers will also find Molecular and photochemical information of over 700 fluorophores A database of parameters including light excitation ranges molar absorption coefficients fluorescence quantum yields molecular brightness and many more Information derived from multiple disciplines including microscopy nanoscopy biochemistry and molecular biology

Fluorescent Dye Labels and Stains is the essential reference for pharmaceutical and biomedical researchers and professionals academics who study molecular biology or organic chemistry and any professional whose work includes strong and photostable molecular absorptions and fluorescence
