Complete the following questions as you read the sixth chapter content—Energy Flow and Chemical Cycling in the Biosphere.

1. Define the process of photosynthesis.

The process in which plants, algae, and some bacteria transform light energy to chemical energy stored in the bonds of sugar.

2. Assuming you wrote the definition word for word from the textbook, now rewrite the definition using your own words.

The process by which plants, algae and bacteria go through, with the use of light energy, to produce energy for themselves and through the process providing oxygen to their surroundings.

3. Complete the table that compares the roles of producers and consumers in an ecosystem.

	Producers	Consumers
Role(s) within an ecosystem	Autotrophs make their own food out of inorganic ingredients.	Heterotrophs are organism that cannot make their own food, so they eat organic material for energy.
Example	Plants	Koalas, animals

4. Energy and chemicals move through ecosystems in different ways. Nutrients are constantly **recycled** through the ecosystem, while energy moves through an ecosystem in **one** direction.

Highlights of the Second Edition include reorganized chapters that improve the presentation of material. Coverage of new topics such as green chemistry. Adding photographs to the lectures to illustrate and emphasize important concepts. A downloadable solutions manual. The second edition of *Organic Chemistry: An Acid-Base Approach* constitutes a significant improvement upon a unique introductory technique to organic chemistry. The reactions and mechanisms it covers are the most fundamental concepts in organic chemistry that are applied to industry, biological chemistry, biochemistry, molecular biology, and pharmacy. Using an illustrated conceptual approach rather than presenting sets of principles and theories to memorize, it gives students a more concrete understanding of the material. **Choice**, 1974

Glencoe Science, 2002 *Biochemistry Explained* Thomas Millar, 2018-12-14 *Biochemistry Explained* employs an innovative approach which has proven highly successful in the author's own classes. The author establishes a thorough understanding of the foundations of and common linkages between molecular structures and reactions so that eventual interpretation of complex biochemical pathways and reactions is easy. All of the major molecular structures and biochemical pathways are explained and for the most part these center on mammalian biochemistry. The text is supported by biochemical nomenclature and questions to bear in mind while reading. Higher learning sections are also provided for advanced students. Written in an informal conversational style, this textbook will serve as an invaluable resource for any student who is struggling with the standard texts and for postgraduate students who need to refresh their knowledge. *Chemistry of Matter*, 1993 As the reader reads this textbook, he will learn about the interactions of matter that can occur in a test tube in nature and even inside himself.
