Part I Multiple Choice

Note: For all questions referring to solutions, assume that the solvent is water unless otherwise stated.

Directions: Each set of lettered choices below refers to the numbered statements immediately following it. Select the one lettered choice that best fits each statement and then blacken the corresponding space on the answer sheet. A choice may be used once, more than once, or not at all in each set.

Questions 1-3

- (A) F
- (B) S
- (C) Mg
- (D) Ar
- (E) Mn

1. Forms monatomic ions with 2- charge in solutions
2. Forms a compound having the formula KXO_4
3. Forms oxides that are common air pollutants and that yield acidic solution in water

Questions 4-7

- (A) Hydrofluoric acid
- (B) Carbon dioxide
- (C) Aluminum hydroxide
- (D) Ammonia
- (E) Hydrogen peroxide

4. Is a good oxidizing agent
5. Is used to etch glass chemically
6. Is used extensively for the production of fertilizers
7. Has amphoteric properties

Questions 8-9

- (A) A network solid with covalent bonding
- (B) A molecular solid with zero dipole moment
- (C) A molecular solid with hydrogen bonding
- (D) An ionic solid
- (E) A metallic solid

8. Solid ethyl alcohol, C_2H_5OH
9. Silicon dioxide, SiO_2

Questions 10-13

- (A) CO_3^{2-}
- (B) $Cr_2O_7^{2-}$
- (C) NH_4^+
- (D) Ba^{2+}
- (E) Al^{3+}

Assume that you have an "unknown" consisting of an aqueous solution of a salt that contains one of the ions listed above. Which ion must be absent on the basis of each of the following observations of the "unknown"?

10. The solution is colorless
11. The solution gives no apparent reaction with dilute hydrochloric acid.
12. No odor can be detected when a sample of the solution is added drop by drop to a warm solution of sodium hydroxide.
13. No precipitate is formed when a dilute solution of H_2SO_4 is added to a sample of the solution.

Advanced Placement Examination in American History John W. Crum, 1990 Women and Minorities in Science and Engineering, 1986 **Resources in Education**, 1986 *Women and Minorities in Science and Engineering* Michael F. Crowley, National Science Foundation (U.S.), 1986 Only the Best Shirley Boes Neill, George W. Neill, 1989 *Social Sciences Index*, 1987 **The College Board Review**, 1997 *Metals Abstracts*, 1985 *Business Cycle Theory* Günter Gabisch, Hans-Walter Lorenz, 1987 **The Rational Expectations Equilibrium Inventory Model** Tryphon Kollintzas, 1989-02-21 This volume contains six essays that develop and or apply rational expectations equilibrium inventory models to study the time series behavior of production sales prices and inventories at the industry level This is an extension of the inventory model of Holt Modigliani Muth and Simon 1960 to account for discounting infinite horizon planning observed and unobserved stochastic shocks in the production factor adjustment storage and backorders management processes of firms as well as in the demand they face for their products and rational expectations This volume should be primarily of interest to researchers in business cycle phenomena and applied industrial organization However it should also be useful to students in applied dynamic economics and econometrics in general *Equity, Incentives, and Taxation* Georg Tillmann, 1989-05-10 This book deals with the problems of redistribution if different kinds of taxes are used as instruments It throws light on the equity efficiency and insurance aspects of taxation and treats the topic at a high theoretical level Using two ordinal equity criteria it is shown in the first part of the book that equity and efficiency cannot be reconciled in a general model Even if in a more restricted model equitable states exist they cannot be implemented using an income tax Part two of the book scrutinizes the range for redistribution which remains in a first best world if there is imperfect information and only special signals can be observed such as labour supply income or both The range of redistribution for these kinds of taxes is illustrated and compared In part three a situation under uncertainty where a tax works as an insurance is investigated The structure of the optimal tax scheme for several welfare functions is explored The results with respect to equity and the range of redistribution for different sorts of taxes are of particular interest The approach to the subject is not really new since standard microeconomic tools are used The book s beneficial contribution lies in its presentation of new results with respect to the equity debate and to the incentive compatibility literature **Nonlinear Economic Dynamics** Tõnu Puu, 1989 The present study is a preliminary draft on nonlinear economic dynamics with which the author has been concerned the last years It grew out from the joint work by Professor Martin Beckmann and the present author on nonlinear statics in spatial economics Beckmann and Puu *Spatial Economics* North Holland 1985 The monograph mentioned contains sections on price waves and business cycles but in a linear format The rest is static theory The author has finally come to the conviction that linear dynamic modelling has very little to yield This is due to the poor set of alternatives decay or explosion of motion pertinent to linear models Therefore the present work centres on non linearity Another distinction is that only purely causal

models are dealt with as those formatted as inter temporal equilibria hardly belong to the more restricted field of dynamics The spatial origin is visible in the choice of models Chapter 2 summarizes the work by the author on the structural stability of continuous spatial market equilibrium models Chapter 3 deals with a re formulation of the ingenious population growth and diffusion model invented by the young Hotelling in 1921 Chapter 4 is a detailed digression on business cycle models in a continuous spatial format with interregional trade

The Labor Market and Business Cycle Theories

Piero Ferri, Edward Greenberg, 1989 Interest in business cycles has had its ups and downs After a period of almost steady state growth and of economic tranquility when the business cycle seemed to be obsolete the turbulence of the 70s and 80s has contributed to a renewed interest in the topic Important analytical and methodological innovations have also favored the present abundance of contributions Four innovations are of particular importance i microfoundations ii nonlinearities iii stochastic variables iv real aspects Both Classical macroeconomics and new Keynesian approaches seem to share these characteristics which apply both to endogenous and exogenous explanations of the cycle The distance separating the newer literature from its forebears seems vast Previously cycle theory was characterized by a macro approach and utilized nonlinearities either through piecewise linear models or with the aid of Classical theorems in the field of dynamic systems To consider and to compare the old and the new literature on business cycles is one of the goals of this book To narrow the distance separating them is another goal of this research We do not try to bridge it but rather to revisit the former tradition with new tools Finally a particular emphasis is put on the ceilings and floors type of literature One of us has written a D Phil thesis with Sir John Hicks and both have worked with H P Minsky Hicks along with Goodwin introduced the concept of ceilings and floors into business cycle analysis and Minsky made important contributions to the area

Capacity Oriented

Analysis and Design of Production Systems M.B.M. de Koster, 1989-01-25 This book gives an analysis of capacity performance of multi stage multi product production systems Special attention is given to performance criteria like throughput average work in process and average throughput time A model is developed to represent such production systems A development of a single product continuous product flow model is given along with an analysis of the model for different layouts and different control systems Attention is given to layouts like flow lines assembly disassembly systems buffersharing networks and control systems like base stock control workload control control by finite buffers and control by reorder point systems The model and analysis techniques are applied to three different multi stage multi product case situations

Game Theoretical Foundations of Evolutionary Stability

Immanuel M. Bomze, Benedikt M. Pötscher, 1989-02-22 These Lecture Notes arose from discussions we had over a working paper written by the first author in fall 1987 We decided then to write a short paper about the basic structure of evolutionary stability and found ourselves ending up with a book manuscript Parts of the material contained herein were presented in a seminar at the Department of Mathematics at the University of Vienna as well as at a workshop on evolutionary game theory in Bielefeld The final version

of the manuscript has certainly benefitted from critical comments and suggestions by the participants of both the seminar and the workshop Thanks are also due to S Bomze de Barba R Burger G Danninger J Hofbauer R Selten K Sigmund G Stiastry and F Weising The co operation of W Muller from Springer Verlag Heidelberg is gratefully acknowledged Vienna November 1988 Immanuel M Bomze Benedikt M Potscher III Contents 1 Introduction 1 2 Strategies and payoffs 5 2 1 A general setting for evolutionary game theory 6 2 2 Mixed strategies and population games 8 2 3 Finite number of strategies 13 2 4 Infinitely many pure strategies 15 2 5 Structured populations asymmetric contests and multitype games 17 2 6 Additional remarks 21 3 Evolutionary stability 25 3 1 Definition of evolutionary stability 25 3 2 Evolutionary stability and solution concepts in classical game theory 30 3 3 Conditions for evolutionary stability based on the normal cone 31 3 4

Alternative Theories of Output, Unemployment, and Inflation in Germany: 1960-1985 Christine Sauer, 1989-03-08 This book is motivated by the disagreement among Monetarist Keynesian and New Classical economists about the short term determinants of output unemployment and inflation It exposes the reader to a synthesis modeling approach which allows the derivation of the opposing theories as special cases from a single general framework so that the macroeconomic controversy is reduced to tests of alternative statistical hypotheses While similar studies have been conducted for the U S economy this study is the first to consider an open economy and let the data speak about the determinants of output unemployment and inflation in Germany The analysis proceeds in two steps First the empirical validity of commonly maintained hypotheses about the behavior of macrovariables under fixed and flexible exchange rates is assessed The results provide useful information for the specification of a structural model of the German economy Second the general macrodynamic model is specified which implies the opposing schools of thought as special cases The competing hypotheses are tested with nested regression equations to avoid the observational equivalence problem

Estimation of Dynamic Econometric Models with Errors in Variables Jaime Terceiro Lomba, 1990-04-04 A new procedure for the maximum likelihood estimation of dynamic econometric models with errors in both endogenous and exogenous variables is presented in this monograph A complete analytical development of the expressions used in problems of estimation and verification of models in state space form is presented The results are useful in relation not only to the problem of errors in variables but also to any other possible econometric application of state space formulations

Aspiration Based Decision Support Systems Andrzej Lewandowski, Andrzej P. Wierzbicki, 1989-05-10 It is not easy to summarize even in a volume the results of a scientific study conducted by circa 30 researchers in four different research institutions though cooperating between them and jointly with the International Institute for Applied Systems Analysis but working part time sponsored not only by IIASA's national currency funds but also by several other research grants in Poland The aims of this cooperative study were defined broadly by its title Theory Software and Testing Examples for Decision Support Systems The focusing theme was the methodology of decision analysis and support related to the principle of reference point optimization developed by the editors of this volume

and called also variously aspiration led decision support quasi satisfying framework of rationality DIDAS methodology etc This focusing theme motivated extensive theoretical research from basic methodological issues of decision analysis through various results in mathematical programming in the fields of large scale and stochastic optimization nondifferentiable optimization cooperative game theory motivated and needed because of this theme through methodological issues related to software development to issues resulting from testing and applications We could not include in this volume all papers theoretical methodological applied software manuals and documentation written during this cooperative study *DECOMP: an Implementation of Dantzig-Wolfe Decomposition for Linear Programming* James K. Ho, Rangaraja P. Sundarraj, 1989-11-22 For linear optimization models that can be formulated as linear programs with the block angular structure i.e independent subproblems with coupling constraints the Dantzig Wolfe decomposition principle provides an elegant framework of solution algorithms as well as economic interpretation This monograph is the complete documentation of DECOMP a robust implementation of the Dantzig Wolfe decomposition method in FORTRAN The code can serve as a very convenient starting point for further investigation both computational and economic of parallelism in large scale systems It can also be used as supplemental material in a second course in linear programming computational mathematical programming or large scale systems **Life Cycles and Long Waves** Tibor Vasko, Robert U. Ayres, Louis Fontvieille, Centre régional de la productivité et des études économiques (Montpellier, France), 1990
