Introductory Linear Algebra, with Applications Bernard Kolman, 1980

Elementary Differential Equations with Applications Charles Henry Edwards, David E. Penney, 1994 This introduction to elementary differential equations covers a range of real world applications numerical and computer material and treatment of contemporary topics It encompasses phase plane diagrams modelling graded problem sets and illustrative programs written in BASIC

Differential Equations Charles Henry Edwards, David E. Penney, 1996 This work focuses on the mathematical

modelling of real world phenomena It contains 2000 graded problems and computer projects that illustrate the use of computer algebra systems like Maple Mathematica and MATLAB

Elliptic Differential Equations Wolfgang Hackbusch, 2017-06-01 This book simultaneously presents the theory and the numerical treatment of elliptic boundary value problems since an understanding of the theory is necessary for the numerical analysis of the discretisation It first discusses the Laplace equation and its finite difference discretisation before addressing the general linear differential equation of second order The variational formulation together with the necessary background from functional analysis provides the basis for the Galerkin and finite element methods which are explored in detail A more advanced chapter leads the reader to the theory of regularity Individual chapters are devoted to singularly perturbed as well as to elliptic eigenvalue problems The book also presents the Stokes problem and its discretisation as an example of a saddle point problem taking into account its relevance to applications in fluid dynamics
