**Fading and Shadowing in Wireless Systems** P. Mohana Shankar, 2011-12-07

The study of signal transmission and deterioration in signal characteristics as the signal propagates through wireless channels is of great significance

The book presents a comprehensive view of channel degradation arising from fading and shadowing

Various statistical models including simple hybrid compound complex and cascaded ones are presented with detailed derivations along with measures to quantify the deterioration such as the amount of fading error rates and outage probabilities

The models range from the Rayleigh and Rician through Suzuki generalized K cascaded and alpha mu and similar ones

This is followed by the analysis of mitigation of fading and shadowing through diversity simple hybrid micro and macro level and combining algorithms

The density and distribution functions error rates and outages are derived and results analyzed to quantify the improvements

The effects of co channel interference before and after the implementation of diversity are also analyzed

To facilitate easy understanding of the models and analysis the background information in terms of probability and random variables is presented with relevant derivations of densities of linear and nonlinear transformation of random variables the sums products ratios as well as order statistics of random variables of all types

The book also provides material on digital modems of interest in wireless systems

Thus the book with 1100 equations and 350 Matlab generated figures and tables is an ideal source for students educators researchers and professionals in wireless communications allowing access to information currently unavailable
