DIN
15 018
Part 1

Kranen; Grundsätze für Stahltragwerke; Berechnung

Supersedes April 1974 edition

In keeping with current practice in standards published by the International Organization for Standardization (ISO), a comma has been used throughout as the decimal marker.

Dimensions in mm

DIN 15 018 Part 1 and Part 2 have been published following an abridged procedure as specified in DIN 820 Part 4, in the form of corrected editions. This method of processing, as well as the corrections that have now been made, were notified and explained in the DM-Mitteilungen (DIN News) 51, 1982, volume No. 6, pages 480 to 485.

It would have been inadvisable to revise the content of the standard at the present time, in view of the general approval which has greeted its publication, and mainly because of the current discussions on the national basic standards relating to steel structures (DIN 18800); furthermore, the efforts of ISO/TC 98 to achieve an internationally approved ruling with regard to the loads and load combinations which are to be assumed for the verification by calculation of the performance characteristics of cranes, had to be borne in mind.

The principal corrections, including those which have arisen from the processing of the comments received, are described in the Explanatory notes.

Structural Engineering, Mechanics and Computation A. Zingoni, 2001-03-16 Following on from the International Conference on Structural Engineering Mechanics and Computation held in Cape Town in April 2001 this book contains the Proceedings in two volumes There are over 170 papers written by Authors from around 40 countries worldwide The contributions include 6 Keynote Papers and 12 Special Invited Papers In line with the aims of the SEMC 2001 International Conference and as may be seen from the List of Contents the papers cover a wide range of topics under a variety of themes There is a healthy balance between papers of a theoretical nature concerned with various aspects of structural mechanics and computational issues and those of a more practical nature addressing issues of design safety and construction As the contributions in these Proceedings show new and more efficient methods of structural analysis and numerical computation are being explored all the time while exciting structural materials such as glass have recently come onto the scene Research interest in the repair and rehabilitation of existing infrastructure continues to grow particularly in Europe and North America while the challenges to protect human life and property against the effects of fire earthquakes and other hazards are being addressed through the development of more appropriate design methods for buildings bridges and other engineering structures

Recommendations of the Committee for Waterfront Structures Harbours and Waterways HTG, 2015-11-09 The EAU 2012 takes into account the new generation of standards which is shortly to be introduced into the building control system it consists of Eurocode 7 the associated national application documents and additional national regulations DIN 1054 2010 In certain cases partial safety factors are determined differently based on experience in practice This means that the safety standard of sea and port buildings remains in place the recommendations nevertheless satisfy the requirements for international recognition and application regarding the planning design specification tender procedure construction and monitoring as well as the handover of and cost accounting for port and waterway systems under uniform criteria

Fatigue Assessment of Welded Joints by Local Approaches Dieter

Radaj, C M Sonsino, W Fricke, 2006-10-30 Local approaches to fatigue assessment are used to predict the structural durability of welded joints to optimise their design and to evaluate unforeseen joint failures This standard work provides a systematic survey of the principles and practical applications of the various methods It covers the hot spot structural stress approach to fatigue in general the notch stress and notch strain approach to crack initiation and the fracture mechanics approach to crack propagation Seam welded and spot welded joints in structural steels and aluminium alloys are also considered This completely reworked second edition takes into account the tremendous progress in understanding and applying local approaches which has been achieved in the last decade It is a standard reference for designers structural analysts and testing engineers who are responsible for the fatigue resistant in service behaviour of welded structures *Scheme for the Reciprocal Recognition of Tests and Inspections Carried Out on Lifting Appliances* European Free Trade Association, 1978 *Civil Engineering*, 1999 **Annual Book of ASTM Standards** ASTM International, American Society for Testing and Materials, 2004 **Welding Journal**, 1979 Welding Research Abroad, 1998 **Proceedings of the International Conference Joining of Metals** Osama A.
