   The nervous system controls and coordinates all activities in the body. It allows us to respond to changes in our environment and helps regulate bodily functions.

2. **Name the two main parts of the nervous system and describe their roles!**

   - Central Nervous System (CNS): Consists of the brain and spinal cord; it processes information and coordinates activities.
   - Peripheral Nervous System (PNS): Connects the CNS to the rest of the body; it relays information to and from the CNS.

3. **What is the difference between sensory neurons and motor neurons?**

   - Sensory Neurons: Carry information from the senses to the CNS.
   - Motor Neurons: Transmit signals from the CNS to muscles or glands to initiate action.

   The brain processes sensory information, makes decisions, controls thoughts, emotions, and bodily functions, and sends signals to the rest of the body.

5. **What is the spinal cord's main function?**

   The spinal cord connects the brain to the peripheral nerves and coordinates reflexes. It serves as a pathway for transmitting information between the body and the brain.

6. **How does a reflex action work and why is it important?**

   A reflex action is an automatic response to a stimulus that occurs without conscious thought. It helps protect the body by allowing a quick reaction to potentially harmful situations.

7. **Describe the role of the autonomic nervous system!**

   The autonomic nervous system controls involuntary actions, such as heart rate, digestion, and breathing, to help maintain internal balance (homeostasis).
