

Bioenergetics :

Photosynthesis:

- An endothermic reaction as energy is transferred from the environment to the chloroplasts by light.

Word equation + Symbol equation :

Carbon dioxide + water --> oxygen + glucose

INVESTIGATING PHOTOSYNTHESIS:

To figure out if photosynthesis has occurred or not, we can use iodine to test it. Iodine is used to test for starch which is a product of photosynthesis.

STEPS:

Place leaf in boiling water for 2 minutes to stop it from photosynthesising

Leave leaf in ethanol to remove the green colour

Rinse leaf in warm water to soften the leaf and wash of any excess ethanol

Add iodine to see if the leaf has starch. Postive result: Blue/black

Negative result: Orange/brown

Make sure the leaves from plants are from atleast three different conditions like a plant in the dark, the light and part of the plant in the dark and some in the light.
