A Wide Speed Range Induction Motor Drive Based on Electronic Pole Changing Mohamed Osama E. Mohamed, 1997 *Development of Brushless Self-excited and Self-regulated Synchronous Generating System for Wind and Hydro Generators* Izzat, Likaa Fahmi Ahmed, 2013-01-01 In this work a developed model of brushless synchronous generator of wound rotor type is designed analyzed by FEM practically applied and investigated A comparison of results with conventional machines is also performed The presented machine can be applied for multi pole wind hydro generators or double poles diesel engine generators It is self excited by residual magnetism and a connected capacitor It is also self regulated by making use of fluctuations at load or limited speed changes The generated voltage may last at extended speed range by arranging a generating system with variable capacitance By eliminating the permanent magnets or advanced manufacturing technology of rotor poles and without using extra rotating external DC exciters an efficient excitation field and an output of flat self compensated compound characteristic are obtained More the feature of damper windings is determined Concerning the fact of environmental diminishing of elements in materials of permanent magnets and D C Battery the presented novel machine is hence a good alternative and more economic from generators exist in the market Beside it is safer and highly recommended for power stability when connected to the grid

degree of mechanical freedom i.e. rotary and linear motors. Examples of modeling two types of rotary disc motors and flat linear motor with twisted primary part are presented with inclusion of finite stator and rotor length and width effects. The simulation results are backed by the measurements carried out on the laboratory models which were tested on the unique measurement stand.

The Field Orientation Principle in Control of Induction Motors Andrzej

Trzynadlowski, 1993-12-31. The Field Orientation Principle (FOP) constitutes a fundamental concept behind the modern technology of high performance vector controlled drive systems with AC motors. The recent intense interest in these systems has been spawned by the widespread transition from DC to AC drives in industry. Induction motors industry's traditional workhorses are particularly well suited for FOP based vector control. The Field Orientation Principle in Control of Induction Motors presents the FOP in a simple easy to understand framework based on the space vector dynamic model of the induction machine. Relationships between the classic phasor equivalent circuits of the motor and their vector counterparts are highlighted. A step by step derivation of dynamic equations of the motor provides a formal background for explanation of the basic approaches to vector control. In addition the author presents scalar control methods for low performance drives as an intermediate stage between uncontrolled and high performance drives. The reader will also find a full chapter devoted to power inverters which constitute an important component of adjustable speed AC drive systems and a review of associated issues such as observers of motor variables, parameter estimation, adaptive tuning and principles of the position and speed control of field oriented induction motors. With a wealth of numerical examples and computer simulations illustrating the ideas and techniques discussed and an extensive bibliography, The Field Orientation Principle in Control of Induction Motors is a practical resource and valuable reference for researchers and students interested in motor control, power and industrial electronics and control theory.
