

[10] From Wooldridge (2020) Computer Exercise 2.C1: For this problem, you need the Excel file `401k_data` and the text file `401K_description`. The data in the Excel file, which are described in the text file, are a subset of the data analyzed by a researcher who studied the relationship between participation in a 401(k) pension plan and the generosity of the plan. The variable *prate* is the percentage of eligible workers with an active account; this is the variable we would like to explain. The measure of generosity is the plan match rate, *mrate*. This variable gives the average amount the firm contributes to each worker's plan for each \$1 contribution by the worker. For example, if $mrate = 0.50$, then a \$1 contribution by the worker is matched by a 50¢ contribution by the firm.

- (a) Find the average participation rate and the average match rate in the sample of plans.
- (b) Now estimate the simple regression equation $\widehat{prate} = \hat{\beta}_0 + \hat{\beta}_1 mrate$ and report the results along with the sample size and R^2 value.
- (c) Interpret the intercept in your equation. Interpret the coefficient on *mrate*.
- (d) Find the predicted *prate* when $mrate = 3.5$. Is this a reasonable prediction? Explain what is happening here.
- (e) How much of the variation in *prate* is explained by *mrate*? Is this a lot in your opinion?

Jonathan P. Bowen, Andreas Fett, Michael G. Hinchey, 2011-04-06 1 In a number of recent presentations most notably at FME
96 one of the foremost scientists in the field of formal methods C A R Hoare has highlighted the fact that formal methods are
not the only technique for producing reliable software This seems to have caused some controversy not least amongst formal
methods practitioners How can one of the founding fathers of formal methods seemingly denounce the field of research after
over a quarter of a century of support This is a question that has been posed recently by some formal methods skeptics
However Prof Hoare has not abandoned formal methods He is reiterating 2 albeit more radically his 1987 view
that more than one tool and notation will be required in the practical industrial development of large scale complex computer systems
and not all of these tools and notations will be or even need be formal in nature Formal methods are not a solution
but rather one of a selection of techniques that have proven to be useful in the development of reliable complex systems and to
result in hardware and software systems that can be produced on time and within a budget while satisfying the stated
requirements After almost three decades the time has come to view formal methods in the context of overall industrial scale
system development and their relationship to other techniques and methods We should no longer consider the issue of whether we
are pro formal or anti formal but rather the degree of formality if any that we need to support in system development This is
