

Chapter 8 Rotational Motion
Banked Airplanes

An airplane banks as it turns along a horizontal circular path in the air. Except for the thrust of its engines and air resistance, the two significant forces on the plane are gravitational mg (vertical) and lift L (perpendicular to the wings).

Vector Component Analysis:

With a ruler and a pencil, resolve vector L into two perpendicular components, horizontal L_x and vertical L_y . Make these vectors dashed to distinguish them from L .

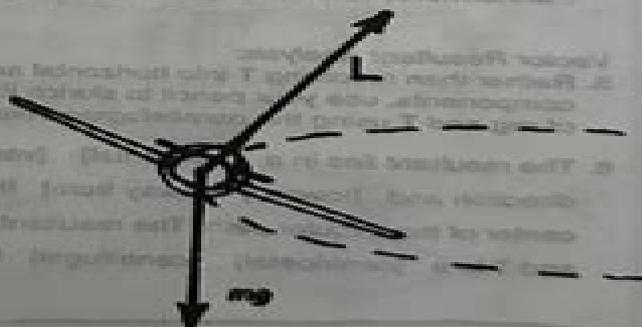

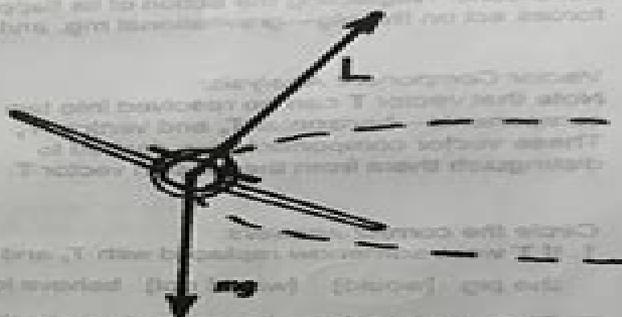

Circle the correct answers.

- The velocity of the airplane at any instant is
[along the radius of] [tangent to] its circular path.
- If L were somehow replaced with L_x and L_y , the airplane [would] [would not] behave the same as being supported by L .
- Since the airplane doesn't accelerate vertically, component L_y must be [greater than] [less than] [equal and opposite to] mg .
- Since the plane continues in circular motion, component L_x must equal [zero] [m^2/l] and be a [centripetal] [centrifugal] [nonexistent] force. Furthermore, L_x is [along the radius of] [tangent to] the circular path.

Vector Resultant Analysis:

- Rather than resolving L into horizontal and vertical components, use your pencil to sketch the resultant of mg and L using the *parallelogram rule*.
- The resultant lies in a [horizontal] [vertical] direction and [toward] [away from] the center of the circular path. The resultant of mg and L is a [centripetal] [centrifugal] force.
- The resultant of mg and L is the same as [L_x] [L_y].

Challenge: Explain in your own words why the resultant of two vectors can be the same as a single component of one of them.

Conceptual Physics Paul G. Hewitt, 2000-06 Active Learning: Theoretical Perspectives, Empirical Studies and Design Profiles Robert Cassidy, Elizabeth S. Charles, James D. Slotta, Nathaniel Lasry, 2019-07-11 This book represents the emerging efforts of a growing international network of researchers and practitioners to promote the development and uptake of evidence based pedagogies in higher education at something a level approaching large scale impact By offering a communication venue that attracts and enhances much needed partnerships among practitioners and researchers in pedagogical innovation we aim to change the conversation and focus on how we work and learn together i.e. extending the implementation and knowledge of co design methods In this first edition of our Research Topic on Active Learning we highlight two of the three types of publications we wish to promote First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community These types of studies constitute the practice pull that we see as a necessary counterbalance to knowledge push in a more productive pedagogical innovation ecosystem based on research practitioner partnerships Second are studies empirically examining the implementations of evidence based designs in naturalistic settings

and under naturalistic conditions Interestingly the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as in between straddling the two worlds As a result these publications represent both the rigours of research and the pragmatism of reflective practice In forthcoming editions we will add to this collection a third type of publication design profiles These will present practitioner developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners instructional designers and researchers alike We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner researcher interactions that promote co design in pedagogical innovation

Maxwell's Demon Harvey S. Leff, Andrew F. Rex, 2014-07-14 About 120 years ago James Clerk Maxwell introduced his now legendary hypothetical demon as a challenge to the integrity of the second law of thermodynamics Fascination with the demon persisted throughout the development of statistical and quantum physics information theory and computer science and linkages have been established between Maxwell s demon and each of these disciplines The demon s seductive quality makes it appealing to physical scientists engineers computer scientists biologists psychologists and historians and philosophers of science Until now its important source material has been scattered throughout diverse journals This book brings under one cover twenty five reprints including seminal works by Maxwell and William Thomson historical reviews by Martin Klein Edward Daub and Peter Heimann information theoretic contributions by Leo Szilard Leon Brillouin Dennis Gabor and Jerome Rothstein and innovations by Rolf Landauer and Charles Bennett illustrating linkages with the limits of computation An introductory

chapter summarizes the demon's life from Maxwell's illustration of the second law's statistical nature to the most recent exorcism of the demon based on a need periodically to erase its memory. An annotated chronological bibliography is included.
