

Mathematical Analysis: Axiomatic Approach

1. Introduction

1.1. Motivation and Scope

The purpose of this course is to provide a rigorous foundation for mathematical analysis. We will explore the properties of real numbers, functions, and limits, and how these concepts are interconnected through a series of axioms and theorems.

The course is divided into several parts. The first part, **Real Numbers**, introduces the real number system and its properties. The second part, **Functions**, discusses the properties of functions and their graphs. The third part, **Limits and Continuity**, explores the concept of limits and how they relate to continuity. The final part, **Differentiation and Integration**, covers the calculus of functions and the relationship between the two.

The course is designed for students who have a strong background in algebra and geometry. It is a prerequisite for more advanced courses in analysis and topology. The course will be taught in a lecture format, with a focus on problem-solving and the development of mathematical reasoning skills.

2. Real Numbers and the Real Line

The real number system is defined by a set of axioms. The most important of these are the **Order Axioms**, which describe the relationship between the real numbers and the real line. The real line is a complete ordered field, meaning that every non-empty set of real numbers that is bounded above has a least upper bound.

The real line is a complete metric space, meaning that every Cauchy sequence of real numbers converges to a real number. This property is essential for the study of limits and continuity. The real line is also a topological space, and the topology induced by the metric is the standard topology on the real line.

The real line is a connected space, meaning that it cannot be separated into two disjoint non-empty open sets. This property is crucial for the study of functions and their graphs. The real line is also a separable space, meaning that it has a countable dense subset. This property is important for the study of integration and the Lebesgue measure.
