

INTERACTIONS IN PHYSICS

Interaction

Read the passage carefully before answering.

Interactions between objects often involve forces. These forces include gravity, electricity, and magnetism among others.

Gravity is a universally attractive force that acts on the downward but an infinite range, meaning it can keep things orbiting the Sun or cause them to fall to the ground and the distance between them. It always weakens.

Electric and magnetic forces are components of the electromagnetic force, depending on repelling or attracting each other and with a short range. It causes magnets to attract or repel each other. It causes electrical forces to attract or repel each other. It causes electrical forces to attract or repel each other.

Electricity determines the direction of flow. Forces attract or repel charges in the direction of flow. These are conventional currents in circuits. It is the direction of flow that determines the direction of force.

Understanding these forces helps explain why objects attract and repel. Magnetism is a force that is a component of the electromagnetic force.
