Shaping Smart for Better Cities Alessandro Aurigi,Nancy Odendaal,2020-11-14 Shaping Smart for Better

Cities powerfully demonstrates the range of theoretical and practical challenges opportunities and success factors involved in successfully deploying digital technologies in cities focusing on the importance of recognizing local context and multi layered urban relationships in designing successful urban interventions The first section Rethinking Smart in Places interrogates the smart city from a theoretical vantage point The second part Shaping Smart Places examines various case studies critically Hence the volume offers an intellectual resource that expands on the current literature but also provides a pedagogical resource to universities as well as a reflective opportunity for practitioners The cases allow for an examination of the practical implications of smart interventions in space whilst the theoretical reflections enable expansion of the literature Students are encouraged to learn from case studies and apply that learning in design Academics will gain from the learning embedded in the documentation of the case studies in different geographic contexts while practitioners can apply their learning to the conceptualisation of new forms of technology use Demonstrates how to adapt smart urban interventions for hyper local context in geographic parameters spatial relationships and socio political characteristics Provides a problem solving approach based on specific smart place examples applicable to real life urban management Offers insights from numerous case studies of smart cities interventions in real civic spaces

Towards User-Centric Transport in Europe 3 Imre Keseru, Annette Randhahn, 2023-03-30 This book gathers contributions to the EU funded Horizon 2020 project INDIMO Inclusive Digital Mobility Solutions its sister projects DIGNITY Digital Transport in and for Society and TRIPS Transport Innovation for Persons with Disabilities Needs Satisfaction which have been focusing on making transport systems inclusive and accessible for all Digitalization has enabled the emergence and proliferation of novel disruptive transport and delivery services These services are often exclusively only available through digital channels such as a smartphone app or website Yet a substantial segment of the population is at risk of being excluded from these services for a variety of reasons Therefore it is strongly necessary to integrate inclusivity and accessibility into the design and operation of mobility services This book aims at discussing cases of and reasons for digital exclusion in transport It also investigates the role of participatory and user centric planning and design methods in making digital mobility more inclusive and accessible Further it discusses tools and technologies that could help policy makers to develop digital mobility as a more inclusive and accessible service This is an open access book

Education For All: Ten years of open education luminaries from around the world David T. Kindler, Marcela Morales, Paul Stacey, 2021-12-07 Education for all is a bold audacious statement But that is the very goal of open education Can you imagine a world where access to education materials is free Where teachers and learners have the right to reuse revise remix localize and translate those materials Where copies of textbooks and course materials can be retained without cost Can you imagine a world where teachers and learners co create education together A world where learners engage in assignments that generate global public goods benefiting everyone You may say this isn t possible but open educators around the world have been doing this for years Building on the work of luminaries such as those featured in this book open education has grown into a global movement transforming education Each year Open Education Global opens up nominations for awards to the entire global open education community As part of the 10th anniversary of these awards OEGlobal is publishing this Education For All book collecting all ten years of award winners into a single volume This book is a celebration of their achievements

Contribution on the behavior of welded joints to metallic structural elements with tubular section Dr.-Ing. Patrick Heinemann, 2023-02-22 Doctoral Thesis Dissertation from the year 2022 in the subject Engineering Civil Engineering grade Summa cum laude language English abstract Steel structures which are made of hollow section profiles are mainly used for construction structures There are many fields of applications for structures made of hollow section profiles Hollow section profiles are

lightweight and have got a high resistance to compression which is an advantage for column structures. The most common profile types have squared or circular hollow cross sections. Connecting two or more pipes by welding the joints have got different shapes. These joints are part of trusses or columns with a tree shaped optic. The standards have got restrictions regarding the geometry material or load cases. By choosing a node which is excluded in the standards designing engineers have to create their own models. This thesis is about the designing of a Y shaped steel joint full overlapped on top connection which is not defined in current standards up to the time the thesis is created. In this thesis only uniplanar joints are investigated. A special focus is on the welding line which has got a three dimensional shape. The aim is to figure out the influence on the inclination angle between the two members on the resistance of the joint. Beside this the profile shape and profile thickness vary to see the differences in their resistance. Square and circular hollow section profiles are in focus. To analyse the behaviour of the different steel joints a numerical and experimental investigation is executed. Design charts are created as a medium for designing engineers to calculate the ultimate resistance in the elastic and plastic state depending on the steel profile thickness and inclination angle. The structure of the thesis is split into four main parts. Firstly there is an explanation of the general topic with its difficultness. Secondly there is the state of the art presentation of literature and standards in this range. Thirdly there is a numerical analysis of the joints. The basement of the numerical studies is detailed in pre studies which explain and compare different mesh types or geometrical variations. Fourthly there is an experimental verification of the numerical tests. It is figured out if the inclination angle increase the resistance of the steel joint will decrease significantly. This effect is non linear. Beside this it is found that the full overlapped joint with the squared profile has got a higher resistance than a comparable joint with a similar circular hollow section.
