### A. HOW TO STRIP

Proper adjustment of this stripper is important for best results. Blade and stop heights are on top of the stripper and the blade adjustment is parallel to the blade. Blade depth can be adjusted for end or window-type wire. Place the wire in the notch central to the blade. Rotate the stripper so the blade adjustment does not slide away from you. The cut between the parallel cuts gives the wire in the next notch. Press the head until you hear the blade cutting through the insulation. Push the cable separation, or you need an end strip, pull the strip off the head.

### B. ADJUSTING THE BLADES

Press the wire in the head to pivot, push up to the blade. Loosen the screws, adjust the blade to desired depth, tighten the screws of the blade. Turn the stripper around to cut the second blade the other side. For better results you may have to do same steps for the tuning of the blades.

NOTE: Best, consistent results are obtained by cutting a single wire for a given wire type.

### C. ABISOLIEREN
