Earth Science Minerals Chapter Review:

Glencoe Earth Science Ralph M. Feather, 1999 Earth science is the study of Earth and space It is the study of such things as the transfer of energy in Earth's atmosphere the evolution of landforms patterns of change that cause weather the scale and structure of stars and the interactions that occur among the water atmosphere and land Earth science in this book is divided into four specific areas of study geology meteorology astronomy and oceanography p 8 9 Epidotes Axel Liebscher, Gerhard Franz, 2018-12-17 Volume 56 of the Reviews in Mineralogy and Geochemistry reviews the current state of knowledge on the epidote minerals with special emphasis on the advances that were made since the comprehensive review of Deer et al 1986 In the Introduction we review the structure optical data and crystal chemistry of this mineral group all of which form the basis for understanding much of the following material in the volume In addition we provide some information on special topics such as morphology and growth deformation behavior and gemology Thermodynamic properties Chapter 2 Gottschalk the spectroscopy of the epidote minerals Chapter 3 Liebscher and a review of the experimental studies Chapter 4 Poli and Schmidt constitute the first section of chapters These fields are closely related and all three chapters show the significant progress over the last years but that some of the critical questions such as the problem of miscibility and miscibility gaps are still not completely solved This section concludes with a review of fluid inclusion studies Chapter 5 Klemm a topic that turned out to be of large interest for petrogenetic interpretation and leads to the description of natural epidote occurrences in the second section of the book These following chapters review the geological environments of the epidote minerals from low temperature in geothermal fields Chapter 6 Bird and Spieler to common metamorphic rocks Chapter 7 Grapes and Hoskin and to high and ultrahigh pressure Chapter 8 Enami Liou and Mattinson and the magmatic regime Chapter 9 Schmidt and Poli Allantite Chapter 10 Gier and Sorensen and piemontite Chapter 11 Bonazzi and Menchetti on which a large amount of information is now available are reviewed in separate chapters Finally trace element Chapter 12 Frei Liebscher Franz and Dulski and isotopic studies both stable and radiogenic isotopes Chapter 13 Morrison are considered We found it unavoidable that there is some overlap between individual chapters This is an inherited problem in a mineral group such as the epidote minerals which forms intensive solid solutions between the major components of rock forming minerals as well as with trace elements *Earth* Marshak, Stephen, 2018-07-31 The most dynamic hands on introduction to physical geology Glencoe Science McGraw-Hill Staff, 2001-08 **Merrill Earth Science** Ralph M.
