Powering Electrical Designs with Intelligent Modeling

Bentley's electrical and instrumentation design applications allow you to consolidate and automate your electrical designs while transcending the limits of un-intelligent CAD graphics. With these integrated physical and electrical design applications, you can complete substation design faster. Quickly conquer the most complex cabling projects with 3D roadway design and automatic cable routing. Save time and reduce errors with intelligent electrical design for machine controls, plants, mining equipment, and more.

The following innovative examples were selected from Bentley's Year in Infrastructure Awards program.

The program annually recognizes the world's most outstanding infrastructure projects. The projects are submitted by Bentley's software users and are judged by a jury of independent experts who adhere to the highest standards in determining which of the projects exemplify innovation, superior vision, and an unwavering commitment to exceptional quality and productivity. They showcase how users, just like you, have successfully employed Bentley's electrical and instrumentation design applications to solve their real-world infrastructure challenges.
