Advances in Data and Web Management Guozhu Dong, Xuemin Lin, Wei Wang, Yun Yang, Jeffrey Xu Yu, 2007-06-26 This book constitutes the refereed proceedings of the joint 9th Asia Pacific Web Conference APWeb 2007 and the 8th International Conference on Web Age Information Management WAIM 2007 held in Huang Shan China June 2007 Coverage includes data mining and knowledge discovery P2P systems sensor networks spatial and temporal databases Web mining XML and semi structured data privacy and security as well as data mining and data streams Triggers and Ranked Keyword Searches Over Virtual XML Views Feng Shao, 2007 Current systems that publish XML relational data using XML views are passive in the sense that they can only respond to user initiated queries over the XML views Further existing systems do not support ranked keyword searches over virtual XML views which is important for exploring and retrieving information from large views In this dissertation we propose an XML view system whereby users can place active triggers on virtual unmaterialized XML views and can efficiently evaluate keyword search queries over such views In this architecture we present scalable and efficient techniques for processing triggers over nested views by leveraging existing support for SQL triggers over flat relations in commercial relational databases When evaluating the keyword search queries our approach exploits indices present on the base data and thereby avoids computing large parts of the view that are not relevant to the query results Another feature of the algorithm is that it supports top k results for queries over the virtual view and the resulting rank order is the same as if the view was materialized We have implemented our proposed techniques in the context of the Quark XML middleware system Our performance results indicate that our proposed techniques are a feasible approach to supporting triggers and ranked keyword searches over virtual XML views Abstract *Information Discovery on Electronic Health Records* Vagelis Hristidis, 2009-12-10 Exploiting the rich information found in electronic health records EHRs can facilitate better medical research and improve the quality of medical practice Until now a trivial amount of research has been published on the challenges of leveraging this information Addressing these challenges *Information Discovery on Electronic Health Records* explores the technology to unleash the data stored in EHRs Assembling a truly interdisciplinary team of experts the book tackles medical privacy concerns the lack of standardization for the representation of EHRs missing or incorrect values and the availability of multiple rich health ontologies It looks at how to search the EHR collection given a user query and return relevant fragments from the EHRs It also explains how to mine the EHR collection to

extract interesting patterns group entities to various classes or decide whether an EHR satisfies a given property Most of the book focuses on textual or numeric data of EHRs where more searching and mining progress has occurred A chapter on the processing of medical images is also included Maintaining a uniform style across chapters and minimizing technical jargon this book presents the various ways to extract useful knowledge from EHRs It skillfully discusses how EHR data can be effectively searched and mined *Keyword Search in Structured and Semistructured Databases* Vagelis Hristidis,2004
