

## Electrical Troubleshooting Form

**1 - Symptom Recognition:** List notable indications, system responses, panel readings & indications, operator observations, sensory observations, etc.  
Specify the problem in as much detail as is available at this time.

[Click or tap here to enter text.](#)

**2 - Symptom Elaboration:** Verify observed reports and problems; Perform appropriate tests, operations, etc. Record detailed findings. Understand system (including reviewing references if needed).

[Click or tap here to enter text.](#)

**3 - Determine the Faulty Systems:** Make a list of each major system (or function) that could potentially cause the noted observations or problems. Then, perform strategic testing and analysis as needed to prove (or disprove) faulty systems (or functions). Note - Proving all other functions good can be as useful and/or as easy as proving a single function bad sometimes.

[Click or tap here to enter text.](#)

**4 - Determine the Faulty Sub-System (or Component):** Make a list of each major sub-system that could potentially cause the noted observations or problems. Then, perform strategic testing and analysis as needed to prove (or disprove) faulty systems (or functions). Note - Proving all other functions good can be as useful and/or as easy as proving a single function bad sometimes.

*Note – this is the same as #3; just zoomed into the next level.*

[Click or tap here to enter text.](#)

**5 - Definitively Prove the Fault:** Perform strategic testing and analysis as needed to prove (or disprove) faulty component within the faulty sub-system. Verify the suspected component is bad with secondary checks (such as resistance checks, etc.) to ensure it is indeed defective and caused the noted problem(s).

[Click or tap here to enter text.](#)

**6 - Failure Analysis:** Determine the root cause of the failure (RCF). Research possible causes of the failure, and test as needed to verify the root cause of the problem. Once the RCF has been determined, perform (or plan) necessary work to resolve the issue permanently. In some cases, resolving the RCF of a problem may require a subsequent work order or even engineering work – but it will save hassles in the long run.

[Click or tap here to enter text.](#)

**7 – Retesting / Operational Readiness Verification:** Once the RCF has been determined, make list of necessary testing needed to confirm FULL operational capability of the entire system (including potential new problems introduced by new components, testing, loosened connections, incorrect reconnections or improper configurations, etc.).
