

Chapter 19 Population Biology

Ecology

- The study of the interactions among organisms and between organisms and their nonliving environment.

Population Growth

◆ Density-dependent factors

- A factor whose influence on population size and growth depends on the number and crowding of individuals in the population.

For example- predation (the preying of one animal on others.

◆ Density-independent factors

- A factor that influences population size and growth regardless of the numbers and crowding within a population

For example- weather

Population Ecology

◆ Distribution pattern

- Organisms distributed in geographic space.
- It depends on resources and interactions with other members of the population.
- Reflect behavioral or ecological adaptation.

Random Distribution

- Individuals are equally likely to be anywhere within the area.
- May allow individuals to maximize their access to resources

Clumped Distribution

- When resources are unevenly distributed across the landscape
- Or when social behavior dictates grouping

For example- High-density clumps are separated by areas of low abundance

Uniform Distribution

- Individuals maximize space between them by being uniformly spaced.
- Results from territorial behavior

Population Density

- Is the # of organisms per given area

Isle Royale

- Anything that affects the size of one population could affect the size of another population in an ecosystem as well

For example- A # of factors influence the likelihood that wolves will kill moose

Other factors affecting population size

- Disease

For example- canine parvovirus (cpV) mainly affects dogs and is spread from dog to dog by direct or indirect contact with their feces.

- Climate change (less eating in warm weather and warm weather favors ticks)
