Totsky, Alexander A. Zelensky, Victor F. Kravchenko, 2014-12-11 By studying applications in radar telecommunications and digital image restoration this monograph discusses signal processing techniques based on bispectral methods Improved robustness against different forms of noise as well as preservation of phase information render this method a valuable alternative to common power spectrum analysis used in radar object recognition digital wireless communications and jitter removal in images *Improved Techniques for Bispectral Reconstruction of Signals* Gopalakrishnan Sundaramoorthy, 1990 Higher order cumulants and spectra have found a variety of uses in many areas of digital signal processing The third order spectrum or bispectrum is of specific interest to researchers because of some of its properties The Bispectrum is defined as the fourier transform of the third order cumulant sequence for stochastic processes and as a triple product of fourier transforms for deterministic signals In the past bispectral analysis has been used in applications such as identification of linear filters quadratic phase coupling problems and detection of deviations from normality This work is aimed at developing techniques for reconstructing deterministic signals in noise using the bispectrum The bispectrum is zero for many noise processes and is insensitive to linear phase shifts The main motivation of this work is to exploit these properties of bispectrum that are potentially useful in signal recovery The existing bispectral recovery techniques are discussed in the signal reconstruction framework and their main limitation in handling noisy deterministic signals is brought out New robust reconstruction procedures are provided in order to use bispectrum in such cases The developed algorithms are tested over a range of simulated applications to bring out their robustness in handling both deterministic and stochastic signals The new techniques are compared with existing bispectral methods in various problems This thesis also discusses some of the tradeoffs involved in using bispectrum based reconstruction approaches against non bispectral methods Abstract [Neural and Stochastic Methods in Image and Signal Processing](#), 1992 **Proceedings of InCoME-V & CEPE Net-2020** Dong Zhen, Dong Wang, Tianyang Wang, Hongjun Wang, Baoshan Huang, Jyoti K. Max Nikias, 2026-03-03 American Trojan is the captivating story of a refugee who lost everything and then rebuilt it all an immigrant who defied the odds and achieved the American Dream a visionary technologist who transformed the University of Southern California into one of the nation's most prestigious private research universities At a time when many universities have succumbed to ideology over truth under Nikias's leadership USC retained its academic integrity in the face of high stakes negotiations high rolling donors and the profound challenges of modern leadership Hailing from a humble village on the island of Cyprus Nikias steeped in thousands of years of history as he grew up But when the Turkish invasion of 1974 destroyed everything his family had built he came to America to see what the Land of Opportunity had to offer Upon completion of his graduate engineering studies he embarked on an academic career that established him as a pioneer in digital signal analysis lead him to collaborate on military projects with the U S Navy and eventually led him to USC which would forever alter the trajectory of his career and life Against this dramatic backdrop American Trojan offers candid insights into how Nikias bold vision transformed USC into one of America's most elite universities More than a personal story it is a blueprint for leadership offering insights into how Nikias and his team strategized to meet formidable challenges to USC An urgent examination of higher education's current crisis American Trojan provides a roadmap for renewal offering specific recommendations for how universities can reclaim their true mission of transmitting knowledge and cultivating young minds
