

Chromosome Mutation Activity

On the left, the numbered rectangle represents a chromosome. Each of the numbers are meant to represent several bands on a chromosome. Cut out each rectangle chromosome while keeping the individual numbered squares attached. Your goal is to perform a mutation to each of your numbered chromosomes. Tape or glue the mutated chromosome to the paper next to each type of mutation. The insertion and translocation mutations will require two different chromosomes (circle and rectangle). One rule is each mutated chromosome must start with the number one and end with the number six.

Deletion: Example - removing a base from the sequence

Inversion - switches the order of 1 or more of the bases in the sequence

Duplication - a piece or base that is copied one or more times in the sequence

Insertion - adding a base from another strand of DNA

Translocation - Transfer of a piece of 1 chromosome to another. (2 strands will swap pieces)
