**Textbook of Veterinary Physiology** Pradip Kumar Das, Veerasamy Sejian, Joydip Mukherjee, Dipak Banerjee, 2023-08-31  
This textbook explores the fundamental qualitative and quantitative aspects of veterinary physiology. It presents the morphological description of the organs, tissues, and cells involved in the physiological system with species variation. The book provides the most up-to-date information and in-depth knowledge in animal physiology. The book addresses a broad range of topics including the physiology of digestion in monogastric animals, ruminants, and birds, and the cardiovascular and respiratory systems in different animals. The chapters contain a wealth of information on the areas related to the endocrine system, excretory system, body fluid homeostasis, hematology, male and female reproductive systems, coordination of body functions, and regulation of brain functions and sense organs. Further, this book acquaints students with advanced topics like the immune system, assisted reproductive technology, ovarian dynamics, environmental physiology, and thermoregulation and behavioral physiology. This textbook contains clear illustrations, including graphical abstracts and study questions for each chapter, making this book a valuable learning resource for veterinary sciences and veterinary medicine students. Further, to attract students and create interest in them, interesting facts related to animal physiology have also been highlighted in form of 'Know more widgets'.

In this there have been introduced many new features bringing the work up to date. These include a discussion of Mendelian inheritance, many modifications in the account of the theory of evolution, and a considerable enlargement of the Protozoa, and especially of the pathogenic forms, making the volume of more value to the student of medicine. To have included these without changes elsewhere would have resulted in a much larger volume. But the demand in American colleges has been for a smaller work, and so a reduction has been made in two ways. There has been a condensation by the elimination of unnecessary words and phrases, and by the omission of considerable matter of minor importance. Then there has been the recognition of the fact that the book has two uses: one in the classroom, the other as a reference work. The two classes of matter have been distinguished by difference of type. No attempt has been made to bring the systematic names into accord with the latest vagaries of the systematists. No useful and

could be served by changing or transferring the well known names of Echidna Coluber Amia Homarus Unio Holothuria Am ba etc while the confusion this would introduce would be enormous It should be understood that while the revision is based upon the German edition of Professor Hertwig he should not be held responsible for any changes introduced The whole responsibility for these rests upon the American reviser
