**Government Cloud Procurement** Kevin McGillivray,2021-12-16 In Government Cloud Procurement Kevin McGillivray explores the question of whether governments can adopt cloud computing services and still meet their legal requirements and other obligations to citizens The book focuses on the interplay between the technical properties of cloud computing services and the complex legal requirements applicable to cloud adoption and use The legal issues evaluated include data privacy law GDPR and the US regime jurisdictional issues contracts and transnational private law approaches to addressing legal requirements McGillivray also addresses the unique position of governments when they outsource core aspects of their information and communications technology to cloud service providers His analysis is supported by extensive

research examining actual cloud contracts obtained through Freedom of Information Act requests With the demand for cloud computing on the rise this study fills a gap in legal literature and offers guidance to organizations considering cloud computing *ICCSM2014-Proceedings of the International Conference on Cloud Security Management ICCSM-2014* Barbara Endicott-Popovsky,2014-10-07 These Proceedings are the work of researchers contributing to the 2nd International Conference on Cloud Security Management Security ICCSM 2014 being held this year at the University of Reading UK on the 23 24 October 2014 The conference chair is Dr John McCarthy Vice President from the Cyber Security ServiceTech UK and the Programme Chair is Dr Barbara Endicott Popovsky from the Center for Information Assurance and Cybersecurity University of Washington Seattle USA As organisations rush to adopt Cloud Computing at a rate faster than originally projected it is safe to predict that over the coming years Cloud Computing will have major impacts not only on the way we conduct science and research but also on the quality of our daily human lives Computation research education and business communities have been exploring the potential benefits of Cloud Computing and the changes these imply Experts have predicted that the move to the cloud will alter significantly the content of IT jobs with cloud clients needing fewer hands on skills and more skills that administer and manage information Bill Gates was recently quoted How you gather manage and use information will determine whether you win or lose Cloud Computing impacts will be broad and pervasive applying to public and private institutions alike **Business Process on-Demand; Studying the Enterprise Cloud Computing and its Role in Green IT** Seyed Amir Beheshti,2011-08-24 Master s Thesis from the year 2011 in the subject Engineering Industrial Engineering and Management grade 1 Vienna University of Technology course Business Engineering and Computer Science language English abstract Climate change and the impact it has on our lives have forced many governmental and also non governmental organizations to conceive of new rules regulations and standards to control CO2 and greenhouse gas GHG emissions Calculating the energy efficiency and reducing the electricity consumption in data centers are important steps towards greening the IT in organizations Several studies have shown that by migrating into the cloud companies in most cases could reduce their costs in addition to decreasing their greenhouse gas emissions Unfortunately lack of guidelines and varying and limited services from different cloud providers have made the adoption of appropriate Cloud services a challenge for many organizations In this regard there is a vital need to study and analyze available services from different cloud vendors and provide enterprises with the best solutions available regarding their specific business requirements This thesis focuses on cloud computing and its efficiency for individual organizations It attempts to study the potential benefits of cloud computing by taking the environmental and energy consumption advantages into consideration Cloud Computing is not a new concept and has been a hype term in recent years Cloud computing is based on the available technologies and it is all about using a new term for the existing technologies But the question is why to create a new name for what already exists The answer to this question is closely related to the potential that Cloud

computing has for organizations It is all about conversion of capital expenditure CAPEX to the operational expenditure OPEX and the possible advantages that this conversion could have for any organization that chooses to migrate into the Cloud In the following upon introducing the cloud computing concept and its related technologies business functions and processes information systems available for enterprises are explored Later based on the required business processes and functions of organizations a comprehensive market analysis is carried out For this purpose different cloud providers and their available services are analyzed I developed an ontology for cloud computing based on the market analysis This thesis is an attempt to make the process of mapping business processes functions to cloud services easier by providing organizations with a matrix of cloud services business processes distribution of market and an ontology for cloud computing

*Cloud Computing. Actionable Architecture* Mathews George, 2014-01-23 Script from the year 2011 in the subject Computer Science Technical Computer Science grade 2 0 language English abstract This paper will demonstrate a pragmatic methodology used in conjunction with UML unified modeling language BPMN business process modeling notation along with engineering principles for describing an actionable architecture for cloud computing in the real world The fundamental paradigm of cloud computing whether it is for private or public usage revolves around the provisioning of services for everyone through rich resources that can be synergized through Internet based protocols The true definition of Cloud Computing is according to the author all about the practicalities of outsourcing all aspects of using computing resources to some form of external agency This means that the assumption for any cloud computing usage is the fact that the agency has a powerful resource base hardware software infrastructure platforms power supply backups failover mechanisms as well as management skills Therefore all users of the cloud

computing services provided by the agency can work in a well defined demand supply mode with an insurmountable base of possible fault tolerant mechanisms to support best possible user experiences The user will have the unique experience of not being worried about where his her work is being done because cloud computing as defined above will enable him her to work in a virtualized environment but with the feeling of being close to the resources However the apparent ease available through cloud computing will raise problems associated with diverse types of risks Hence it is imperative to define new architectural blueprints as well as the associated business processes around them so as to provide measurable metrics that will allay the fears of any user The architectural blueprint is not just meant to be a lot of diagrams and documents but they are to be modeled as actionable artifacts These actionable artifacts will allow for operational excellence that covers all types of functional as well as non functional requirements that any user expects The MDA model driven architecture approach coupled with BPM business process modeling and engineering principles as posited in this paper will allow for management of distributed communication scheduling security enhancements and rights as well as many other aspects that will make the user experience enjoyable and successful
