Abstract

CMU Common Lisp is an implementation of the Common Lisp run on various Unix workstations. See the README file in the distribution for current platforms. The longest single part of this document describes the Python compiler and the programming style and techniques that the compiler encourages. The rest of the document describes compilers and the implementation decisions made in developing this implementation of Common Lisp. We have added several extensions, including a source-level debugger, an interface to Unix system calls, a foreign function call interface, support for inter-process communication and remote procedure call, and other features that provide a good environment for developing Lisp code.

This research was sponsored by The Defense Advanced Research Projects Agency, Information Science and Technology Office, under the title "Research on Parallel Computing", DARPA Order No. 7138, issued by DARPA/CMU under Contract MDA973-88-2-0001.

The views and conclusions contained in this document are those of the author and should not be interpreted as representing the official policies, either expressed or implied, of the U.S. government.
