CS research papers may be published as: technical reports, conference papers, journal papers or book chapters. Frequently, an author will write a technical report that expands on the information in a conference paper. Results from several conference papers may be combined and expanded into a journal paper. A conference paper may also be expanded later into a book chapter. Finally, PhD dissertations are frequently revised into either journal papers or book chapters.

The timeline, then, is usually: conference paper, technical report, journal paper, book chapter. To get the most recent, "hot off the presses", information, look for conference papers. To get more considered papers with more explanation, look for journal papers.

Conference papers and most journal papers are "peer-reviewed", that is, have been examined by other computer scientists prior to publication. Technical reports are typically not peer-reviewed, but are still excellent sources of detailed information about algorithms and computer systems.

More and more authors post their papers on their personal web sites. If an article is posted on the web, it will probably end up in CiteSeer ([www.citeseer.com](http://www.citeseer.com)). Other places to look for papers include Science Index (available through the library) and preprint servers available from journal publishers such as Elsevier and Kluwer, which may even post copies of papers not yet published!

**What are the different types of CS research paper?**

There are three basic types of CS research paper: theoretical, engineering and empirical.

A theoretical paper describes a theory or algorithm or provides a mathematical proof for some hypothesis.

An engineering paper describes an implementation of an algorithm, or part or all of a computer system or application. Engineering papers are now frequently required to include descriptions of system evaluation.

An empirical paper describes an experiment designed to test some hypothesis.

All three types of paper are found in computational linguistics.
